The international symposium on number theory and analysis in memory of the late famous Chinese mathematician Professor Hua Loo Keng took place in August 1988 at the Tsinghua University in Beijing. Excellent survey lectures and expositions of the most recent results in number theory and analysis were given by experts from all over the world. While Volume I focuses on number theory, Volume II deals mainly with several complex variables, differential geometry and classical complex analysis. Both volumes also include two fascinating accounts of Professor Hua Loo Keng's life and work by Professor S. Iyanaga and Professor Wang Yuan. Highlights in Volume I: D.A. Hejhal: Eigenvalues of the Laplacian for $PSL(2, \mathbb{Z})$: Some new Results and Computational Techniques.- A.A. Karatsuba: On the Zeros of Riemann's Zeta-Function on the Critical Line.- H.E. Richert: Aspects of the Small Sieve.- W.M. Schmidt: On the Number of Good Simultaneous Approximations to Algebraic Numbers.- M.V. This book provides an authoritative overview of the global development of surgical paediatrics. Biographical accounts of key people who developed this relatively new specialty, many of whom are now household names, are presented. The compendium also acknowledges the enormous contribution of imaging (ultrasound/MRI and PET scans), minimal invasive surgery, and fetal surgery, as well as the role of related journals and associations, in the progress of surgical paediatrics. Many of the contributors have been instrumental to the development of surgical paediatrics in their respective countries, and have considerable worldwide influence on the management of children requiring surgical care. Through their valuable insight and first-

hand experience, this book not only shines a light on the past achievements of previous generations of paediatric surgeons, but also serves as a model to encourage future generations to do likewise. As a result, the break-down in secular legal structures throughout the world—a legal crisis which is becoming increasingly obvious to voters, politicians, and humanistic scholars—has not brought with it a cry for the restoration of biblical law, the only alternative which has any possibility of survival in the long run. It is commonly assumed in analysing fatigue data that there is a definite functional relationship between life in number of cycles and stress level. However, as has been pointed out several times (1, 2), an examination of the data shows considerable scatter. Even with carefully prepared smooth specimens, all from the same heat of steel, treated in the same manner and tested in the same laboratory, a range of 2 to 1 in number of cycles for failure at the same stress level is normal (1) and a range of 10 to 1 is not unusual (2). If the specimens are tested by different laboratories, slightly varying techniques will introduce further scatter (3). Witchcraft, occultism, paranormal science, and mysticism are growing like plagues in the Western world. These phenomena have baffled modern educators and conventional rationalists, since such activities seem to be completely opposed to everything that the public schools have taught for over a hundred

years. Worst of all in the minds of conventional secularists, all this discussion of demonic forces may lead to an even more appalling conclusion: the idea that God, also a supernatural force, may reappear in the modern, "post-Christian" world. At all costs, a God who can make himself felt in time and on earth must be avoided. Mysticism is one thing—totally internalized—but supernatural forces are not supposed to have any impact on external, so-called phenomenal affairs. Occultism is another form of humanism. It is the product of the quest for power apart from God and His law-order. It was not a major force in the so-called "Dark Ages." Not until the fifteenth century did witchcraft become a serious problem in Europe, and it was the Renaissance, not medievalism, which sparked the great explosion of demonism and magic in the sixteenth century. During the period of the early Middle Ages (A.D. 500-1000), there were practically no signs of witchcraft in Europe. Only with the revival of ancient Gnosticism and the invasion of Middle Eastern dualism did signs of widespread witchcraft reappear. Occultism and humanism are not sworn enemies; they are first cousins. It was only the influence of Christian principles, which laid such stress on the orderliness of God's universe, that made possible the confidence of modern rationalists in denying the influence of supernatural forces. As the confidence in creation-law has waned in this century, "rational" humanism has become increasingly unsuccessful in retarding the expansion of occult humanism. This Journal of Christian Reconstruction offers readers the necessary evidence for a refutation of the familiar charge that occultism and religion necessarily go together, and that only a hard-headed rationalism can restrain the forces of spiritual anarchy. Far from retarding occultism, modern rationalism's blindness to the reality of occult forces is now creating a perverse inquisitiveness on the part of modernism's children, who have learned to be critical of everything, including old-fashioned rationalism. The philosophy of the "open universe"—closed to God—has produced the new occult experimentalism. If anything except Christian orthodoxy might be true, why not find out through personal observation and experiment? Since

1965, the Western world has faced the greatest explosion of occultism that it has seen in three hundred years. This time no one can blame orthodox Christianity: it has been the secularists who have wielded the power. The NEWS99 international symposium discusses symmetries in electroweak processes in nuclei. Many phenomena in nuclear and particle physics are related to symmetry. It is known that we are living in a left-handed world as far as the Weak interaction is concerned, but neutrino physics suggests that a right-handed world may also be relevant. Chiral symmetry and its breaking plays an essential role in generating hadron masses. Symmetries related to flavor in the strong interaction like isospin, SU(3) and so on are known to be violated although they play a crucial role for the understanding of phenomena in nuclear and particle physics. The treatment of tiny breaking is of particular importance. Weak and electromagnetic interactions are well established at the fundamental level and can be used to probe the structure of nuclei and hadrons. A wide variety of phenomena in nuclear and particle physics were discussed in NEWS99 with an emphasis on symmetry. Topics ranged from nuclear structure to neutrino properties,,covering highly phenomenological to fundamental fields. Secular historians are interested in the wider impact of Puritanism in Anglo-American history.They are interested in Puritan theology only insofar as this theology explains the origins of Puritanism's wider impact. The book is a collection of papers presented at First Doctoral Symposium on Natural Computing Research (DSNCR 2020), held during 8 August 2020 in Pune, India. The book covers different topics of applied and natural computing methods having applications in physical sciences and engineering. The book focuses on computer vision and applications, soft computing, security for Internet of Things, security in heterogeneous networks, signal processing, intelligent transportation system, VLSI design and embedded systems, privacy and confidentiality, big data and cloud computing, bioinformatics and systems biology, remote healthcare, software security, mobile and pervasive computing, biometrics-based authentication, natural language processing, analysis and verification

techniques, large scale networking, distributed systems, digital forensics, and human-computer interaction. The continuing and intensifying economic crises of the twentieth century are the direct product of the interference into the economy by the civil government. The messianic state cannot permit any aspect of human life, animal life, and inorganic nature to assert any claims of lawful independence from political manipulation. The end result of the deification of the state is the breakdown of humanistic society. The belief that modern Israel fulfills biblical prophecy is a theological aberration. Traditional postmillennialists, amillen-nialists, and premillennialists have never believed that national or geographical Israel is relevant this side of the rapture. For the last thirteen years, the Chicago Section of the Society for Applied Spectroscopy has sponsored a symposium in the spring of each year. In this span, the symposia have shown a steady increase in attendance, in the number of papers presented, in the number of sessions, and in the number of days the conference lasted. The duration of the most recent symposium was four days, with sessions devoted to molecular spectroscopy, including infrared, Raman, ultraviolet, and visible, and to X-ray, NMR, emission, and flame spectroscopy, respectively, with a special session devoted to gas chromatography because of its growing interest in applied spectroscopic work. Another feature of this last symposium was the attempt on part of the Symposium Committee to establish and maintain the scientific level at that of applied physics. This should place the present symposium at a level somewhere between that of the Ohio State symposium and that of the Pittsburgh meeting, thus approaching the level of applied chemical physics. In addition, the symposium was designed to offer to scientists from other disciplines and students an opportunity to attend introductory panels and lectures and at the same time the mature investigators a meeting ground and the chance to keep abreast of the latest developments in spectroscopy. How well these aims have been accomplished is best attested to by the phenomenal growth of the symposium. This proceedings present the results of the 29th International Symposium on Shock Waves

(ISSW29) which was held in Madison, Wisconsin, U.S.A., from July 14 to July 19, 2013. It was organized by the Wisconsin Shock Tube Laboratory, which is part of the College of Engineering of the University of Wisconsin-Madison. The ISSW29 focused on the following areas: Blast Waves, Chemically Reactive Flows, Detonation and Combustion, Facilities, Flow Visualization, Hypersonic Flow, Ignition, Impact and Compaction, Industrial Applications, Magnetohydrodynamics, Medical and Biological Applications, Nozzle Flow, Numerical Methods, Plasmas, Propulsion, Richtmyer-Meshkov Instability, Shock-Boundary Layer Interaction, Shock Propagation and Reflection, Shock Vortex Interaction, Shock Waves in Condensed Matter, Shock Waves in Multiphase Flow, as well as Shock Waves in Rarefield Flow. The two Volumes contain the papers presented at the symposium and serve as a reference for the participants of the ISSW 29 and individuals interested in these fields.
