This practical and engaging book provides a coherent approach to global business responsibility and ethics based on the latest research, theory, and practice. The authors incorporate numerous interesting and current real world examples to support the argument that corporations need to - and can - identify and implement processes that foster ethical conduct, ensure basic human rights, protect the natural environment, and enhance social justice wherever businesses operate around the globe. "Global Business Citizenship" combines elements of political theory, stakeholder relationships, business ethics, corporate social performance, accountability and measurement, and organizational change. Its practical approach encompasses "best practices" in stakeholder management, experiments in applying corporate values to local conditions, and social environmental auditing and reporting. Focusing on the strategic alignment and change management process for implementing business citizenship principles and practices, it is an essential supplement for any course concerned with ethics and social responsibility in today's global business climate. In 1956, a prototype of a new passenger car from Volvo was presented. It became known as the Amazon in Sweden and the 121 and 122S in export markets, the latter denoting a more sporty derivative. However, despite its substantial appearance, all Amazons were surprisingly fleet of foot - this was one of the most sporty European saloons of the 1960s. With its elegant, timeless styling the Amazon broke new ground for Volvo - and for passenger cars as a whole. This new book covers the complete story of the Volvo Amazon, from 1956 onwards, including full production histories, comprehensive specification details, and over 250 photographs. The book covers the history of Volvo before and after the Amazon, and development and production of all Amazon derivatives from 1956-1970, including the 121, 122S, 123GT and all of the estate editions. There are biographies of key Volvo personnel, including the company's first designer, Jan Wilsgaard. Also included is the Amazon in motorsport, plus driver biographies: Tom Trana, Sylvia Osterberg and Carl-Magnus Skogh. There is a full buying guide along with tips on tuning and modifying, including rally preparation, and an insight into what the press thought of each Amazon derivative, with pages also devoted to how the car was marketed in period. An ideal resource for owners, or anyone with an interest in the evolution of these classic cars, which is superbly illustrated with 250 colour photographs. Photocatalysis and related processes occupy a strategic position for the future of photochemistry. This volume provides an introduction to basic concepts and explains how applications work at the molecular level. The anthrax attacks in September and October 2001 highlighted the need to develop medical countermeasures. The Project BioShield Act of 2004 authorized the Department of Health and Human Services (HHS) to

procure countermeasures for a Strategic National Stockpile. However, in December 2006, HHS terminated the contract for a recombinant protective antigen (rPA) anthrax vaccine because VaxGen failed to meet a critical contractual milestone. Also, supplies of the licensed BioThrax anthrax vaccine already in the stockpile will start expiring in 2008. GAO was asked to identify (1) factors contributing to the failure of the rPA vaccine contract and (2) issues associated with using the BioThrax in the stockpile. GAO interviewed agency and industry officials, reviewed documents, and consulted with biodefense experts. According to the Hebrew Bible, King Solomon built a Temple to the Lord in Jerusalem on a threshing floor that his father, King David, purchased from Araunah the Jebusite for 50 shekels of silver. "No other building of the ancient world," claims the Anchor Bible Dictionary, "either while it stood in Jerusalem or in the millennia since its final destruction has been the focus of so much attention throughout the ages." This stunning book, with its 160 illustrations, is a history of the Temple or Temples in Jerusalem from Solomon's time to the present. The book reads like an archaeological excavation, digging deeper and deeper at one site. Starting with a discussion of the Palestinian denial of a Jewish Temple, the book proceeds to explore the Islamic Dome of the Rock, the little-known Roman Temple of Jupiter, Herod's massive Temple Mount, the Temple built by the exiles returning from Babylon, and finally Solomon's Temple. With a lively and informative text to accompany the pictures, Jerusalem's Temple Mount is replete with archaeology, history, legends (Jewish, Christian, and Muslim), inscriptions, biblical interpretations, and forgeries. Ehlers-Danlos syndromes (EDS) are a group of heritable connective

tissue disorders (HCTDs) characterized by a variable degree of skin hyperextensibility, joint hypermobility and tissue fragility. The current EDS classification distinguishes 13 subtypes and 19 different causal genes mainly involved in collagen and extracellular matrix synthesis and maintenance. EDS need to be differentiated from other HCTDs with a variable clinical overlap, including Marfan syndrome and related disorders, some types of skeletal dysplasia and cutis laxa. The clinical recognition of EDS is not always straightforward, and, for a definite diagnosis, molecular testing can be of great assistance, especially in patients with an uncertain phenotype. Currently, the major challenging task in EDS is to unravel the molecular basis of the hypermobile EDS that is the most frequent form, and for which the diagnosis is only clinical in the absence of any definite laboratory test. This EDS subtype, as well as other EDS-reminiscent phenotypes, are currently investigated worldwide to unravel the primary genetic defect and related pathomechanisms. The research articles, case report, and reviews published in the Special Issue entitled "Molecular Genetics and Pathogenesis of Ehlers-Danlos Syndrome and Related Connective Tissue Disorders" focus on different clinical, genetic and molecular aspects of several EDS subtypes and some related disorders, offering novel findings and future research and nosological perspectives. Leading sociologist Boaventura de Sousa Santos makes an impassioned case for the politicisation of the World Social Forum, arguing that its full potential as a force for social, economic and political change can be achieved only by taking a stand against neo-liberal globalization, war, famine and corruption. However, since its inception in Porto Alegre in 2001, the World Social Forum has refused to adopt political positions on world events, preferring instead to provide a platform that facilitates cooperation between diverse social

movements. Through a detailed analysis of the WSF's history and organization, he demonstrates that it has always been an inherently political organization, and argues that if the WSF is able to realise its potential as an institution for a new form of politics, it will become a global power to be reckoned with in the 21st century.
