**Effective Patient Education** Jul 19 2022 Effective Patient Education helps health professionals and students develop the skills and knowledge to conduct effective patient education in a highly efficient way. It emphasizes a team approach to patient education, recognizing that, because of the complexity of health care, many health professionals are involved in patient care. This book is therefore written for nurses, physicians, physical therapists, dietitians, pharmacists, and other health care professionals who share responsibility to guide their patients in enhancing and maintaining health and well-being. Effective patient education is a way of communicating that fosters a partnership between the patient and health professional. It involves more than giving information and instruction. In order to conduct effective patient education, health professionals must recognize that individual patient variables influence the degree to which a patient will follow health advice. The health professional can assess the patient's preexisting beliefs and attitudes, fears and anxieties, and individual life and family circumstances in order to communicate health recommendations in accordance with individual patient needs.

**Difficult Conversations in Medicine** Mar 23 2020 In all branches of medicine, effective communication between health care professionals and patients, families and carers is essential to ensure first-class treatment. Increasing public awareness of health issues and the ready availability of health information have led the public to be more widely informed about common conditions and the treatments available. Patients therefore attend a medical consultation better informed so the need for improved communication skills is even greater. This book aims to demystify the 'doctor-patient' relationship in order that patients and potential patients can more easily understand the information which doctors are seeking to convey as well as gaining some insight into the difficulties of communication from a doctor's perspective. Some conversations require specialised skills. Talking to people with difficult personalities and poor social skills can be challenging. Strong emotions of anger, frustration or distress need sensitive handling and particular age groups call on styles of address appropriate to their particular needs. Using the expertise of experienced doctors from many specialties this book covers not only the theory behind good communication skills but also gives a wealth of practical advice. The book covers ethical and legal issues, planning difficult conversations, the patient's and doctor's perspectives, issues surrounding special groups such as children and the elderly, and conversations with patients from different cultural backgrounds. Outlines of possible clinical cases posing specific problems are included with guidance on how to handle them.

**The Practice of Patient Education** Mar 27 2023 With patients leaving the hospital sicker and more care being done in outpatient settings or at home, patients need to become active, informed participants on their health care team. This one-of-a-kind text provides unique advice to help nurses apply their knowledge and skills to teaching patients in the clinical setting with specific diseases,

Covers a variety of learning theories and concepts, as well as strategies for applying them in patient teaching. Uses evidence-based patient education practice, with extensive citations to the research base. Presents key issues in patient education such as literacy, use of patient decision aids, and multiple patient conditions for which organized patient education should be developed. Includes study questions with suggested answers. Teaching basics streamlined for use as the main text for a course or as a supplement to any clinically oriented course. Includes multiple case examples, at every stage of the teaching process, which students can use as models to guide their own practice. New case study approach provides multiple case examples enabling readers to understand how to apply teaching strategies to specific patient types and settings. Now includes significant content in patient self-management of chronic conditions, the largest growing area of patient education.

*Health Professions Education* Oct 10 2021 The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

**Patient Education for People with Parkinson's Disease and their Carers** Jan 01 2021 This manual provides the information and materials needed to conduct an eight-session patient education programme for people with Parkinson's disease and their carers, complementing medical treatment. *Nursing: Health Education and Improving Patient Self-Management* Aug 20 2022 This book describes the latest advances in health education and patients' self-management, addressing core questions such as: How can you motivate a patient to adopt a healthier lifestyle, and how can you support their self-management? Though there is a broad consensus within the nursing profession on the importance of health promotion and the promotion of self-management, nursing professionals often struggle with the underlying theoretical and practical aspects involved, as well as the right type of intervention to use and how to evaluate the results. The book departs from international trends, which primarily underline the importance of prevention and focus on such issues as the increase in the number of people with chronic health problems and co-morbidity, the empowerment of patients, and the technological developments in the health care system. In the first chapters, it examines health at the micro-, meso- and macro-level, combined with epidemiological health indicators. The following chapters focus on prevention, health promotion and self-management, while also broadly discussing prevention. The book then turns to the development and purpose of, as well as plans for, health promotion and health education. The Intervention Mapping protocol is the starting point, addressing questions such as how to motivate a patient to other, healthier behavior. Subsequently, the field of health promotion is extended to disease prevention, patient education and self-management. On the basis of patients' needs, the book describes methods and interventions to promote self-management in detail. Self-management and chronic health problems are also highlighted, along with the patient's social network in connection with self-management and eHealth. Lastly, the book explores the relationship between nursing and health promotion, as well as disease prevention, nursing diagnoses, nursing interventions and care results. Additionally, this edition includes two trainings on 'Promoting the self-management of the patient ' and on 'What is the role of the nursing professional in promoting self-management of the patient?'. **Skin Cancer after Organ Transplantation** Nov 30 2020 Organ transplantation has been performed for almost 40 years with steadily increasing success regarding long-time survival of the graft, as well as quality of life for the patient. However, graft tolerance only can be achieved via induction and maintenance of an impaired immunological surveillance. An increase of skin cancers as a consequence of the lowered cellular immunoresponse seems to parallel the overall increased long-time survival rate of organ transplant recipients. Against the background of chronic immunosuppression known risk factors like the amount of sun exposure prior and post transplantation, oncogenic viruses as well as the genetic background, and place of residence (latitude) are strongly related with the increased skin cancer incidence. The increasing incidence of non-melanoma skin cancer, paralleling a prolonged survival of patients after organ transplantation, represents a significant reason for morbidity and long-term morbidity in organ transplant recipients worldwide. The incidence of non-melanoma skin cancer in liver-, kidney- and heart transplant recipients varies from 1.5 to 22 %, 2 to 24 % and 6 to 34 % after 5 years post transplant. Ultraviolet radiation as well as immunosuppressive therapy are crucial risk-factors regarding the induction and progression of skin cancer. Ultraviolet radiation is related to the induction of DNA damage, as well as interference with Langerhans cell antigen presentation and a Th1 - Th2 shift induced via a release of IL-10. Whereas the overall duration of immunosuppression and the cumulative dosage applied are relevant parameters in the evaluation of an increased tumor risk, individual differences between specific immunosuppressive agents remain unclear. The workup of genetic as well as other unclear phenomenon like the reverse BCC/SCC ratio might shed some further light into the genesis and immunology of the non-melanoma skin cancer in general.

The first part explores the negative impacts of bias, discrimination, and other harms by health care providers against fat individuals. The second part addresses how we can ‘fatten’ pedagogy for current and future health care providers, discussing how we can address anti-fat bias in education for health professionals and how alternative frameworks, such as Health at Every Size, can be successfully incorporated into training so that health outcomes for fat people improve. Examining what works and what fails in teaching health care providers to truly care for the health of fat individuals without further stigmatizing them or harming them, this book is for scholars and practitioners with an interest in fat studies and health education from a range of backgrounds, including medicine, nursing, social work, nutrition, physiotherapy, psychology, sociology, education and gender studies.
