If you ally infatuation such a referred The Pleiadian  
Agenda A New Cosmology For The Age Of Light books  
that will come up with the money for you worth, get the  
certainly best seller from us currently from several  
preferred authors. If you want to humorous books, lots of  
novels, tale, jokes, and more fictions collections are as  
well as launched, from best seller to one of the most  
current released.

You may not be perplexed to enjoy all books collections  
The Pleiadian Agenda A New Cosmology For The Age  
Of Light that we will categorically offer. It is not not far off  
from the costs. Its virtually what you compulsion  
currently. This The Pleiadian Agenda A New Cosmology  
For The Age Of Light, as one of the most involved  
sellers here will very be among the best options to  
review.

Thank you enormously much for downloading The

Pleiadian Agenda A New Cosmology For The Age Of Light. Most likely you have knowledge that, people have look numerous time for their favorite books bearing in mind this The Pleiadian Agenda A New Cosmology For The Age Of Light, but end up in harmful downloads.

Rather than enjoying a good book taking into consideration a mug of coffee in the afternoon, on the other hand they juggled subsequently some harmful virus inside their computer. The Pleiadian Agenda A New Cosmology For The Age Of Light is genial in our digital library an online entrance to it is set as public appropriately you can download it instantly. Our digital library saves in multipart countries, allowing you to get the most less latency time to download any of our books afterward this one. Merely said, the The Pleiadian Agenda A New Cosmology For The Age Of Light is universally compatible later any devices to read.

This is likewise one of the factors by obtaining the soft documents of this The Pleiadian Agenda A New Cosmology For The Age Of Light by online. You might not require more times to spend to go to the ebook foundation as skillfully as search for them. In some cases, you likewise get not discover the publication The Pleiadian Agenda A New Cosmology For The Age Of Light that you are looking for. It will enormously

squander the time.

However below, following you visit this web page, it will be so totally easy to acquire as capably as download guide *The Pleiadian Agenda A New Cosmology For The Age Of Light*

It will not undertake many time as we accustom before. You can reach it even though show something else at house and even in your workplace. thus easy! So, are you question? Just exercise just what we come up with the money for under as well as review *The Pleiadian Agenda A New Cosmology For The Age Of Light* what you next to read!

Yeah, reviewing a books *The Pleiadian Agenda A New Cosmology For The Age Of Light* could mount up your close connections listings. This is just one of the solutions for you to be successful. As understood, triumph does not recommend that you have astonishing points.

Comprehending as well as concord even more than new will have enough money each success. next to, the message as with ease as keenness of this *The Pleiadian Agenda A New Cosmology For The Age Of Light* can be taken as with ease as picked to act.

The Sustainable Development Goals (SDGs) are a universal set of seventeen goals and 169 targets, with accompanying indicators, which were agreed by UN member states to frame their policy agendas for the fifteen-year period from 2015 to 2030. Written by three authors who have been engaged in the development of the SDGs from the beginning, this book offers an insider view of the process and a unique entry into what will be seen as one of the most significant negotiations and global policy agendas of the twenty-first century. The book reviews how the SDGs were developed, what happened in key meetings and how this transformational agenda, which took more than three years to negotiate, came together in September 2015. It dissects and analyzes the meetings, organizations and individuals that played key roles in their development. It provides fascinating insights into the subtleties and challenges of high-level negotiation processes of governments and stakeholders, and into how the SDGs were debated, formulated and agreed. It is essential reading for all interested in the UN, sustainable development and the future of the planet and humankind. The book explores and discusses some of the changes, challenges and opportunities confronting local governance in the context of the new urban paradigm associated with the HABITAT III New Urban Agenda, a 20-year strategy for

sustainable urbanization, adopted in October 2016 in Quito, Ecuador. The chapters included in the book address public policy issues from different theoretical perspectives and methodological approaches, written by authors from different academic disciplines within the broad area of social sciences (Geography, Political Science, Public Administration, Spatial Planning, Law, Regional Science, among other fields), and offer an interdisciplinary vision of these issues. The chapters are written by members of the International Geographical Union (IGU) Commission on Geography of Governance. This book, the product of the task force on research co-sponsored by the American Educational Research Association Division A and the University Council on Educational Administration, sets an ambitious agenda for research in educational leadership. Prominent scholars in the field review current knowledge about leadership, frame new questions to generate important research in the field, and direct researchers and policymakers to rethink how educational administration, leadership, and policy should be understood. Covering a broad range of topics, from accountability systems and school?community relationships to the education of students from diverse backgrounds, the authors submit current research to critical scrutiny in order to develop frameworks for new research that can have a significant impact on policy and practice. In A New Agenda for

Higher Education, the authors endorse higher education's utility for enhancing the practical as well as intellectual dimensions of life by developing a third, different conception of educational purpose. Based on The Carnegie Foundation for the Advancement of Teaching seminar that brought together educators from six professional fields with faculty from the liberal arts and sciences, A New Agenda for Higher Education proposes an educational aim of "practical reason," focusing on the interdependence of liberal education and professional training. This document gives an overview of the main economic, social and environmental trends globally and regionally that influence the achievement of the SDGs in Latin America and the Caribbean and offers a prospective analysis of progress towards the related targets on the basis of 72 statistical series of SDG indicators in the region. It simulates scenarios at 2030 in three crucial topics: unemployment, extreme poverty and greenhouse gas emissions. On this basis, the document concludes with an evaluation of the risks facing achievement of the 2030 Agenda in the region. All the analyses include elements relating to the effects of COVID-19 (coronavirus) , as far as possible with the information available in the last week of March 2020, on the understanding that the behaviour of economic and social variables must necessarily be interpreted with caution amid the current uncertainty. This book will

provide one of the first comprehensive approaches to the study of smart city governments with theories and concepts for understanding and researching 21st century city governments innovative methodologies for the analysis and evaluation of smart city initiatives. The term “ smart city ” is now generally used to represent efforts that in different ways describe a comprehensive vision of a city for the present and future. A smarter city infuses information into its physical infrastructure to improve conveniences, facilitate mobility, add efficiencies, conserve energy, improve the quality of air and water, identify problems and fix them quickly, recover rapidly from disasters, collect data to make better decisions, deploy resources effectively and share data to enable collaboration across entities and domains. These and other similar efforts are expected to make cities more intelligent in terms of efficiency, effectiveness, productivity, transparency, and sustainability, among other important aspects. Given this changing social, institutional and technology environment, it seems feasible and likeable to attain smarter cities and by extension, smarter governments: virtually integrated, networked, interconnected, responsive, and efficient. This book will help build the bridge between sound research and practice expertise in the area of smarter cities and will be of interest to researchers and students in the e-government, public

administration, political science, communication, information science, administrative sciences and management, sociology, computer science, and information technology. As well as government officials and public managers who will find practical recommendations based on rigorous studies that will contain insights and guidance for the development, management, and evaluation of complex smart cities and smart government initiatives. Two decades after the Brundtland Commission's Report "Our Common Future" adopted the concept of 'sustainable development', this book provides a renewal of the concept exploring the potential for new practices and fields for those involved in sustainability activity. The book addresses a number of themes concerning firstly, the provision of a "next generation perspective", which was a central, and still unresolved, notion of the original Brundtland definition and, secondly the provision of new milestones for policy and research that can expand the discussion on this second generation concept on sustainability. The material dealt with in the book offers a wide variety of perspectives on sustainability and reflects the importance of interdisciplinary and transdisciplinary work in the field. Suggesting targets for future analytical and political efforts in achieving global sustainability, this book offers new analytical opportunities for holistic politics and research at a general and sector level.

Noted astrologer and spiritual teacher Barbara Hand Clow channels the voice of Satya, a Pleiadian goddess. Satya describes the huge cosmic drama taking place simultaneously in nine dimensions, with Earth as the chosen theater. The Pleiadians are a group of enlightened beings who believe that the end of the Mayan Calendar will signal a critical leap in human evolution; the Pleiadians will be there to guide us for that leap. This shift is the coming Age of Light, and the entry of our solar system into the Photon Band and the Age of Aquarius. This book sets out a new policy agenda for women. Gender relations are being transformed and a new gender settlement is being created. The challenge to ensure the social inclusion of women within this new settlement is complicated by the diversity in women's lives, in particular between those who are qualified and able to engage in employment and those who are not. Policy concerns that the book addresses include: the welfare provision women need in order to become full citizens; the needs of children and of the elderly; how equal opportunities law could be made to work more effectively; and how to protect women against violence. The concluding chapters address the challenge of ensuring that women are politically represented. This wide-ranging book is written by leading academics who have advised key members of the Labour Party. Across the United States, issues such as sustainability, smart

growth, and livable communities are making headlines. Planning for a New Century brings together leading thinkers in the fields of planning, urban design, education, welfare, and housing to examine those issues and to consider the ways in which public policies have helped create—and can help solve—many of the problems facing our communities. Each chapter identifies issues, provides background, and offers specific policy suggestions for federal, state, and local initiatives. Topics examined include: the relation of existing growth management policies to social equity, as well as how regional growth management measures can make new development more sustainable how an obscure technical procedure in highway design becomes a de facto regional plan ways in which local governments can promote environmental preservation and better-designed communities by rewriting local zoning and subdivision ordinances why alleviating housing shortages and slum conditions has resulted in a lack of affordable housing, and how that problem can be solved how business improvement districts can make downtowns cleaner, safer, and more welcoming to workers and visitors In addition, the book features chapters on public safety, education, and welfare reform that include proposals that will help make regional growth management easier as inner-city crime is reduced, schools are improved, and concentrations of

extreme poverty are eliminated. Planning for the New Century brings together current academic research with pressing public policy concerns, and will be a useful resource for policymakers at all levels of government, for planners and architects, and for students and scholars of urban planning and design, and urban studies. As information technology becomes increasingly essential within organizations, the reputation and role of the CIO has been diminishing. To regain credibility and avoid obscurity, CIOs must take on a larger, more strategic role. Here is a blueprint for doing exactly that. This book shows how CIOs can bridge the gap between IT and the rest of the organization and finally make IT a strategic advantage rather than a cost sink. Although communitarianism has a long history, it has only recently emerged to pose a major challenge to the traditional left-right divide in politics and the competing principles of individualism and collectivism. Communitarianism is the first comprehensive and accessible introduction to communitarianism's ideas and their implications for politics and citizenship. Drawing on a wide range of international examples and engaging with communitarianism's critics, Tam demonstrates clearly its relevance to the United States and the world. Taking on those who would limit sexual freedom, *New Sexual Agendas* challenges the notion that there are fixed sexual behaviors for men and women. This engaging

collection draws on a number of disciplines including women's studies, literature, gender studies, cultural studies, history, politics, education, sociology, and psychology. The purpose of *The Quito Papers* and the *New Urban Agenda* is to start a discussion that both challenges this status quo and opens up new lines of enquiry. It intentionally does not propose a manifesto made up of simplistic slogans and recommendations as cities in the 21st century are more fragile and complex. Its content, therefore, is intentionally broad, ranging from architecture, planning and urban design, to land ownership and regulation, water management and environmental philosophy. This multifaceted assembly of perspectives critiques the tenets of the Charter of Athens, identify new trends and propose new insights on contemporary urbanization. This follow-up to Kate Nesbitt's best-selling anthology *Theorizing a New Agenda* collects twenty-eight essays that address architecture theory from the mid-1990s, where Nesbitt left off, through the present. Kristin Sykes offers an overview of the myriad approaches and attitudes adopted by architects and architectural theorists during this era. Multiple themes—including the impact of digital technologies on processes of architectural design, production, materiality, and representation; the implications of globalization and networks of information; the growing emphasis on sustainable and green

architecture; and the phenomenon of the 'starchitect' and iconic architecture—appear against a background colored by architectural theory, as it existed from the 1960s on, in a period of transition (if not crisis) that centers around the perceived abyss between theory and practice. Theory's transitional state persists today, rendering its immediate history particularly relevant to contemporary thought and practice. While other collections of recent theoretical writings exist none attempt to address the situation as a whole, providing in one place key theoretical texts of the past decade and a half. This book provides a foundation for ongoing discussions surrounding contemporary architectural thought and practice, with iconic essays by Greg Lynn, Deborah Berke, Sanford Kwinter, Samuel Mockbee, Stan Allen, Rem Koolhaas, William Mitchell, Anthony Vidler, Micahel Hays, Reinhold Martin, Reiser + Umemoto, Glenn Murcutt, William McDonough, Micahael Braungart, Michael Speaks, and many more. People and Organisational Development is ideal for both practitioners and students alike. Setting out a new agenda for organisational effectiveness, this book not only covers emergent theories of organisational development and human resources management, it also gives practical examples for how these theories can be applied. Covering everything from how HR can support strategic change and how technology can be an agent of

transformation to performance management, diversity, talent management and emotion at work, this book firmly places HR at the heart of a modern approach to OD. Crucially, *People and Organisational Development* doesn't just examine successful change initiatives, it also covers the unsuccessful attempts at organisational change and what can be learnt from these. There is also invaluable discussion of the OD role of HRD in ethics, corporate social responsibility (CSR) and sustainability. Packed with international case studies and examples, this is essential reading for all those studying the CIPD Level 7 Advanced Organisation Design and Organisation Development module and everyone wanting to make a difference to the development of their people and their organisation. Online supporting resources include additional case studies and practical tools. Is your company delivering products to customers at the right time, place, and price—with the best possible availability and lowest possible cost and working capital? If not, you're probably alienating your customers and suppliers, eroding shareholder value, and losing control of your fixed costs. These dangerous mistakes can put you out of business. In *The New Supply Chain Agenda*, Reuben Slone, J. Paul Dittmann, and John Mentzer explain how to reinvent your supply chain to avoid those errors—and turn your supply chain into a competitive weapon that produces unprecedented economic profit for your firm.

Drawing on a wealth of company examples, the authors show how to activate the five levers of supply chain excellence:

- Putting the right people with the right skills in the right jobs
- Leveraging supply chain technologies such as system optimization and visibility tools
- Eliminating cross-functional disconnects, including SKU proliferation
- Collaborating with suppliers and customers to generate a seamless flow of information and supply chain improvements
- Managing supply chain projects skillfully

Apply the steps in this book, and you build a supply chain that delivers as it should—without leaving money on the table.

Looks at the current state of women's rights in the United States, highlighting the difficulty of juggling career and family, and focusing on the gap between American women and women in other nations around the world. This volume explores agenda-setting theory in light of changes in the media environment in the 21st century. In the decades since the original Chapel Hill study that launched agenda-setting research, the theory has attracted the interest of scholars worldwide. *Agenda Setting in a 2.0 World* features the work of a new generation of scholars. The research provided by these young scholars reflects two broad contemporary trends in agenda-setting: A centrifugal trend of research in the expanding media landscape and in domains beyond the original focus on public affairs, and a centripetal trend further explicating

agenda-setting ' s core concepts. The New Urban Agenda (NUA), adopted in 2016 at the United Nations Conference on Housing and Sustainable Urban Development (Habitat III) in Quito, Ecuador, represents a globally shared understanding of the vital link between urbanization and a sustainable future. At the heart of this new vision stand a myriad of legal challenges – and opportunities – that must be confronted for the world to make good on the NUA ' s promise. In response, this book, which complements and expands on the editors ' previous volumes on urban law in this series, offers a constructive and critical evaluation of the legal dimensions of the NUA. As the volume ' s authors make clear, from natural disasters and resulting urban migration in Honshu and Tacloban, to innovative collaborative governance in Barcelona and Turin, to accessibility of public space for informal workers in New Delhi and Accra, and power scales among Brazil ' s metropolitan regions, there is a deep urgency for thoughtful research to understand how law can be harnessed to advance the NUA ' s global mission of sustainable urbanism. It thus creates a provocative and academic dialogue about the legal effects of the NUA, which will be of interest to academics and researchers with an interest in urban studies. Cutting carbon emissions is urgent but very challenging in wealthy democracies. Energy for the Future analyzes the

changing contexts, imperatives and fault lines, and proposes ways forwards. Greater public engagement and a new approach to markets are vital, but traditional concerns with energy security and economic efficiency cannot be set aside. On the seventy-fifth anniversary of the United Nations, the world has faced its biggest shared test since the Second World War in the coronavirus disease (COVID-19) pandemic. Yet while our welfare, and indeed the permanence of human life, depend on us working together, international cooperation has never been harder to achieve. This report answers a call from UN Member States to provide recommendations to advance our common agenda and to respond to current and future challenges. Its proposals are grounded in a renewal of the social contract, adapted to the challenges of this century, taking into account younger and future generations, complemented by a new global deal to better protect the global commons and deliver global public goods. Through a deepening of solidarity—at the national level, between generations, and in the multilateral system—Our Common Agenda provides a path forward to a greener, safer and better future. Critical Discourse Analysis (CDA) has established itself over the past two decades as an area of academic activity in which scholars and students from many different disciplines are involved. It is a field that draws on social theory and

aspects of linguistics in order to understand and challenge the discourses of our day. It is time for A New Agenda in the field. The present book is essential for anyone working broadly in the field of discourse analysis in the social sciences. The book includes often critical reassessments of CDA's assumptions and methods, while proposing new route-maps for innovation. Practical analyses of major issues in discourse analysis are part of this agenda-setting volume. In this third edition, Paul Light updates his study by weighing the successes and failures of the Bush and Clinton presidencies in setting up a legislative agenda of domestic issues for Congress. The most noticeable development, according to Light, is the shrinking of the agenda and the absence of fresh new ideas. Explaining the emergence of the derivative presidency, he attributes this increasingly limited social arena to the problems associated with the end of the welfare state, the thickening of government, the problems of the budget, the Reagan effect, and the changing nature of party politics. Consisting of 30 concise chapters written by top scholars, this Research Agenda probes the knowledge frontiers of issues long at the forefront of New Institutional Economics (NIE), including government, contracts and property rights. It examines pressing research questions surrounding norms, culture, and beliefs. It is designed to inform and inspire students and those starting their careers in

economics, law and political science. Well-established scholars will also find the book invaluable in updating their understanding of crucial research questions and seeking new areas to explore. These essays explore the theory, politics and practice associated with the changing nature of crime prevention, disorder and community safety and assess their significance in relation to a number of specific groups, such as women. First published in 1999, this volume analyses the conditions related not only to physical violence, but also to domination sustained by cultural norms, development practice and environmental policies. Peace research can be established as an integrative project by developing a conceptually coherent map which helps to reveal the locations and sources of violence, examine strategies to deal with them and illuminate structural transitions to a non-hierarchical world order. The themes in various chapters of this book can be submerged under the disciplinary goal of peace research which links the management and prevention of violent conflicts to non-violent structural transformations. Organizations such as the Sierra Club and Friends of the Earth are familiar to anyone with an interest in environmental protection. As activist groups, they played by the same rules for years. But in 1994, the rules changed. With the Republican takeover of Congress, environmental groups faced sweeping changes in federal policies that threatened the

enforcement of environmental laws. As these organizations intensified their efforts to meet these challenges, they also altered their electoral strategies and political spending patterns. This book traces those actions and shows what they mean for the future of environmentalism in the political arena. While environmental advocacy groups have become bigger and better funded in recent years, so have the corporate interests that compete with them for the attention of public and politicians. *The Green Agenda in American Politics* offers a new look at environmental advocacy that focuses on contemporary lobbying, electioneering, and agenda setting in this new context. Drawing on interviews with activists from a wide range of organizations, Robert Duffy describes what environmental groups actually do when lobbying officials or the public. He examines activity at both national and state levels to emphasize their growing use of websites, email, and action alert networks to conduct more sophisticated grassroots campaigns, and he shows how they are devoting more funds to unregulated forms of spending such as independent expenditure, issue advocacy advertising, and public education campaigns. Duffy also tracks emerging trends in interest group politics and provides an overview of activism through the early 1990s. He then documents the emergence of more aggressive action after 1994, such as providing

campaign services to candidates and mounting voter registration drives. He also shows how state and local groups have begun to play more important roles in the wake of the rollback of federal environmental regulations. Brimming with new insights into interest group lobbies in general and contemporary environmental groups in particular, Duffy's book opens a new window on the influence of Big Money in the supposedly democratic electoral process. A New Global Agenda explores the most compelling issues of our time, highlighting key strategies, initiatives, and calls to action. To catalyze regenerative solutions for People, Society, and Planet, this text engages visionary thought leaders, advocates, and innovators spanning international policy, academia, private sector, and civil society. Growth in a Time of Change: Global and Country Perspectives on a New Agenda is the first of a two-book research project that addresses new issues and challenges for economic growth arising from ongoing significant change in the world economy, focusing especially on technological transformation. The project is a collaboration between the Brookings Institution and the Korea Development Institute. Part I of the book looks at key elements of change from a global perspective. It analyzes how technological change, shifts in investment, and demographic transition are affecting potential economic growth globally and across major groups of economies.

The contributors explore possible scenarios for the global economy as the digital revolution drives rapid technological change, including impacts on growth, jobs, income distribution, trade balances, and capital flows. Technology is changing the global configuration of comparative advantage and globalization increasingly has a digital dimension. The implications of these developments for the future of sectors such as manufacturing and for international trade are assessed. Part II of the book addresses new issues in the growth agenda from the perspective of an individual major economy: South Korea. The chapters in this section analyze how macroeconomic developments and technological change are influencing the behavior of households and firms in terms of their decisions to consume, save, and invest. Rising income and wealth inequalities are a major concern globally. Against this backdrop, trends in the labor income share and wage inequalities in South Korea are analyzed in terms of the role played by technology, industrial concentration, shifts in labor demand and supply, and other factors. Throughout the book, the contributors, in their analysis of both global and Korea-specific trends and prospects, place emphasis on drawing implications for policy. Elgar Research Agendas outline the future of research in a given area. Leading scholars are given the space to explore their subject in provocative ways, and map out

the potential directions of travel. They are relevant but also visionary. This book seeks to answer the question: what do we need to know about the success, failure and future prospects of creating walkable, diverse urbanism? Separating out what we already know from what we don't, it advances a research agenda aimed at helping to sustain the New Urbanism movement. As the book clearly demonstrates, there is a lot we still need to learn about creating and sustaining good cities. A wide array of topics are covered, from big picture concerns about the need for more theory development, to more fundamental topics like sustaining urban retail and encouraging multi-modal transportation. The authors explore research needs from the social, environmental, and economic sides of New Urbanism, from small-scale DIY tactics to large-scale policy platforms like the UN's New Urban Agenda, from zoning reform to autonomous vehicles and climate change. New Urbanism is a large topic, and the research needed to sustain it is equally large. We still need to know - in a more rigorous way - whether, and how, New Urbanist principles are ever achieved, whether the outcomes associated with a particular implementation strategy are providing environmental, social and economic benefits as claimed, and what the best strategy might be for fulfilling each goal. This unique book offers profound and intriguing insights into the development and growth of New

Urbanism. It will be required reading for students and scholars of urban planning and design, and urban studies more broadly. The 50th anniversary of the United Nations Organisation is commemorated in 1995. The UN emerged at the end of the most bloody war in the history of contemporary civilization and it is understandable that its founding fathers were concerned first and foremost with the need "to save succeeding generations from the scourge of war." This great historical mission of the new international organisation was determined and designed by the allied powers that had won the war against the "enemy states." Cooperation of the permanent members of the UN Security Council was the basic element of the efficiency of post-war system of international peace and security. Apart from this main mission, the founding fathers of the United Nations declared their determination "to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and to promote social progress and better standards of life in larger freedom" (preamble, UN Charter). An exploration of the institutional judicial activism of the US Supreme Court through the dramatic changes in its agenda, as it has evolved from 1933 to

the present. Once dominated by economic issues, the agenda is now populated largely by cases involving individual rights and liberties. Explores the great potential for nursing involvement in promoting global health. This unique text elucidates the relationship between global nursing and global health, underscoring the significance of nurses' contributions in furthering the Post-2015 Agenda of the United Nations regarding global health infrastructures, and examining myriad opportunities for nurses to promote the 17 Sustainable Development Goals (SDGs) and foster health and healthy environments worldwide. While past nursing literature has emphasized nursing's potential involvement and influence in the global arena, this is the first book to identify, validate, and promote nurses' proactive and multidimensional work in furthering current transnational goals for advancing health on a global scale. The book includes an introduction to global health, clarification of terms and roles, perspectives on education, research, and theory related to global nursing, a history of the partnership between the United Nations and the nursing profession, an in-depth exploration of the 17 SDGs and relevant nursing tasks, as well as several chapters on creating a vision for 2030 and beyond. It is based on recent and emerging developments in the transnational nursing community, and establishes, through the writings of esteemed global

health and nursing scholars, a holistic dialogue about opportunities for nurses to expand their roles as change agents and leaders in the cross-cultural and global context. The personal reflections of contributors animate such topics as global health ethics, the role of caring in a sustainable world, creating a shared humanity, cultural humility, and many others. Key features: Examines, for the first time, nursing's role in each of the 17 SDGs; Integrates international initiatives delineating nursing's role in the future of global health; creates opportunities for nurses to redefine their contributions to global health; includes personal reflections to broaden perspectives and invite transnational approaches to professional development; distills short, practical, and evidence-based chapters describing global opportunities for nurses in practice, education, and research. Why are the economic interests and priorities of lower- and middle-class Americans so often ignored by the U.S. Congress, while the economic interests of the wealthiest are prioritized, often resulting in policies favorable to their interests? In *Hijacking the Agenda*, political scientists Christopher Witko, Jana Morgan, Nathan J. Kelly, and Peter K. Enns examine why Congress privileges the concerns of businesses and the wealthy over those of average Americans. They go beyond demonstrating that such economic bias exists to illuminate precisely how and why economic policy is so often skewed in favor of

the rich. The authors analyze over 20 years of floor speeches by several hundred members of Congress to examine the influence of campaign contributions on how the national economic agenda is set in Congress. They find that legislators who received more money from business and professional associations were more likely to discuss the deficit and other upper-class priorities, while those who received more money from unions were more likely to discuss issues important to lower- and middle-class constituents, such as economic inequality and wages. This attention imbalance matters because issues discussed in Congress receive more direct legislative action, such as bill introductions and committee hearings. While unions use campaign contributions to push back against wealthy interests, spending by the wealthy dwarfs that of unions. The authors use case studies analyzing financial regulation and the minimum wage to demonstrate how the financial influence of the wealthy enables them to advance their economic agenda. In each case, the authors examine the balance of structural power, or the power that comes from a person or company ' s position in the economy, and kinetic power, the power that comes from the ability to mobilize organizational and financial resources in the policy process. The authors show how big business uses its structural power and resources to effect policy change in Congress, as when the financial industry

sought deregulation in the late 1990s, resulting in the passage of a bill eviscerating New Deal financial regulations. Likewise, when business interests want to preserve the policy status quo, it uses its power to keep issues off of the agenda, as when inflation eats into the minimum wage and its declining purchasing power leaves low-wage workers in poverty. Although groups representing lower- and middle-class interests, particularly unions, can use their resources to shape policy responses if conditions are right, they lack structural power and suffer significant resource disadvantages. As a result, wealthy interests have the upper hand in shaping the policy process, simply due to their pivotal position in the economy and the resulting perception that policies beneficial to business are beneficial for everyone. Hijacking the Agenda is an illuminating account of the way economic power operates through the congressional agenda and policy process to privilege the interests of the wealthy and marks a major step forward in our understanding of the politics of inequality. Reimagining Contract Law Pedagogy examines why existing contract teaching pedagogy has remained in place for so long and argues for an overhaul of the way it is taught. With contributions from a range of jurisdictions and types of university, it provides a survey of contract law courses across the common law world, reviewing current practice and

expressing concern that the emphasis the current approach places on some features of contract doctrine fails to reflect reality. The book engages with the major criticism of the standard contract course, which is that it is too narrow and rarely engages with ordinary life, or at least ordinary contracts, and argues that students are left without vital knowledge. This collection is designed to be a platform for sharing innovative teaching experiences, with the aim of building a new approach that addresses such issues. This book will have international appeal and will be of interest to academics, researchers and postgraduates in the fields of law and education. It will also appeal to teachers of contract law, as well as governmental and legal profession policymakers.
