What happens when former first-generation college (FGC) students successfully graduate from college and then aim for post-undergraduate education? The purpose of this

dissertation is to compare differences between FGC students and non-FGC admissions profiles regarding end-of-first-year performance at UC Berkeley's School of Optometry. The aims of this research project were to a) compare academic performance of FGC and non-FGC students based on GPAs from the end of their first professional school year, and b) examine the relationships among gender, ethnicity, participation in pre-optometry preparatory programs, undergraduate GPA, undergraduate institutional selectivity, Optometry Admissions Test (OAT) scores, and end-of-year GPAs within these two populations. In 2011, all current students at UC Berkeley's School of Optometry were asked to participate in this research study; surveys from 233 students were collected. Book jacket. Metallography is much more than taking striking pictures at high magnifications or polishing and etching specimens in such a way that no scratches can be seen. Basically, metallography is the physical metallurgist's most useful and most used tool for studying metals.

Although it is perhaps his oldest tool, it certainly is not likely to become obsolete. Rather, the continued demands that have been placed upon materials have required more detailed characterizations of their microstructures and this, in turn, has required the metallographer to develop new techniques to make these characterizations. Not too many years ago, the metallographer had only optical microscopes with which to examine his specimens. Now he has electron microscopes, scanning electron microscopes, and a whole host of instruments which were unknown to him only a relatively

few years ago. This has forced him to learn not only how to use these new instruments and how to interpret the information that they provide but it also has made him develop new techniques for preparing the samples for examination. The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily

life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. *Making Eye Health a Population Health Imperative: Vision for Tomorrow* proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels. *Inorganic Phosphors: Compositions, Preparation and Optical Properties* addresses practical and theoretical aspects of inorganic phosphors used in lighting and display applications.
