Shifting Gears at 50 Jun 17 2022 From the publishers of Motorcycle Consumer News, *Shifting Gears at 50* is a one-of-a-kind motorcycling manual for returning and late-entry riders, essentially anyone 40 years old and up who's looking to hit the road on two wheels. Author Philip Buonpastore, a motorcycle journalist and retired US Air Force photographer, helps readers gear up to get back on a motorcycle (or get on one for the first time). In Part 1, "Becoming a Motorcyclist," Buonpastore discusses the basics of buying the right bike, gear, and equipment and getting the bike up to speed. The book continues with a good overview of learning to ride, the importance of taking a road course, venturing out on the first ride, and extending rides to long-distance jaunts. Throughout Part 1 are sidebars by riding- safety instructor and expert Walt Fulton, offering sound advice on safety precautions and execution for every leg of the new and returning rider's journey. The author emphasizes what older riders should be aware of and which factors can affect their rides. Adding lots of great firsthand advice are humorous and helpful stories collected by the author and related by returning riders at various ages, from their late 30s to 60s. In Part 2, Buonpastore shares five of his favorite travelogues covering his long-distance tours around the US, from the American South to the west coasts. This section is illustrated by over 100 of the author's breathtaking photographs of the various locations he toured on his bike. The foreword to the book is provided by best-selling motorcycle author David Hough (author of I-5 Press's *Proficient Motorcycling and Mastering the Ride*). Hough writes, "If you're getting into today's motorcycling at an age your doctor would describe as 'middle aged'

or 'senior,' do you yourself a clever favor and read Phil's book."

Fundamentals of Spacecraft Attitude Determination and Control Mar 02 2021 This book explores topics that are central to the field of spacecraft attitude determination and control. The authors provide rigorous theoretical derivations of significant algorithms accompanied by a generous amount of qualitative discussions of the subject matter. The book documents the development of the important concepts and methods in a manner accessible to practicing engineers, graduate-level engineering students and applied mathematicians. It includes detailed examples from actual mission designs to help ease the transition from theory to practice and also provides prototype algorithms that are readily available on the author's website. Subject matter includes both theoretical derivations and practical implementation of spacecraft attitude determination and control systems. It provides detailed derivations for attitude kinematics and dynamics and provides detailed description of the most widely used attitude parameterization, the quaternion. This title also provides a thorough treatise of attitude dynamics including Jacobian elliptical functions. It is the first known book to provide detailed derivations and explanations of state attitude determination and gives readers real-world examples from actual working spacecraft missions. The subject matter is chosen to fill the void of existing textbooks and treatises, especially in state and dynamics attitude determination. MATLAB code of all examples will be provided through an external website.

***Brewster F2A Buffalo and Export Variants* Apr 22 2020 This comprehensive monograph covers the entire history of Brewster's much maligned Buffalo fighter aircraft. The book starts out with the background of the Brewster Aeronautical Corporation and the events that led to the selection of the F2A as the Navy's first monoplane fighter. Following this, each variant of the aircraft is covered in detail including all three major variants purchased by the US. Navy as well as the versions purchased by Belgium, Finland, Great Britain, and the Netherlands. Individual squadron histories are also included as they relate to the F2A. Many interviews are included with pilots who flew the Buffalo, some with glowing comments on its performance, while others cast a less than stellar light on the Brewster. It is up to the reader to draw his own conclusions as to where the F2A sits in the history of modern aerial warfare. It is interesting to note that the Brewster 239, as used by the Finnish Air Force during the 1939-1945 period achieved the highest kill ratio of any fighter plane of the war with an impressive 26-1 score. Finland produced many Aces with the Buffalo, including the all-time high scoring Buffalo Ace, Hans Wind with 39 aerial kills, and followed**

closely by Ilmari Juutilainen with 34. The book is lavishly illustrated with over 300 photos, many of which have never been published. This is the ultimate history of the Brewster Buffalo.
