The Manual of Standard Tibetan presents the everyday speech of Lhasa as it is currently used in Tibet and among the Tibetan diaspora. It not only places the language in its natural context but also highlights along the way key aspects of Tibetan civilization and Vajrayana Buddhism. The Manual, which consists of forty-one lessons, is illustrated with many drawings and photographs and also includes two informative political and linguistic maps of Tibet. Two CDs provide an essential oral complement to the manual. A detailed introduction presents a linguistic overview of spoken and written Tibetan. The 29th edition of the Manual of Standard Practice contains information on recommended industry practices for estimating, detailing, fabricating, and placing reinforcing steel for reinforced concrete construction. Includes suggested specifications for reinforcing steel. Chapter 3 on bar supports is commonly referenced in project specifications. New material includes a list of specific information on structural drawings that is required by the ACI 318 Building Code and updated illustrations of the markings on Grade 60 and Grade 75 reinforcing

bars. Every design firm, construction company and inspection office that is involved with reinforced concrete needs to own a copy. The NASA Graphics Standards Manual, by Richard Danne and Bruce Blackburn, is a futuristic vision for an agency at the cutting edge of science and exploration. Housed in a special anti-static package, the book features a foreword by Richard Danne, an essay by Christopher Bonanos, scans of the original manual (from

Danne's personal copy), reproductions of the original NASA 35mm slide presentation, and scans of the Managers Guide, a follow-up booklet distributed by NASA. A handbook on the PASCAL computer program language includes discussions

of statements, simple expressions, parameters, subprograms, and structured types. Excerpt from Indexing and Filing: A Manual of Standard Practice In presenting this volume it seems desirable that a brief sketch be given covering the development in the field of indexing and filing. Less than two generations ago the business man handled all of his correspondence from the opening of a communication to its filing, and the man who had sufficient correspondence to require the services of an amanuensis was the exception rather than the rule. The number of papers handled was so limited that the filing question was a more or less negligible one, the usual procedure being to jab the paper on a stick or spindle file, or else stow it away in the drawer of a counter or cupboard. Since then the growth of the country, changes in conditions and new inventions have made it possible to transact business in hours and even in minutes that formerly required days, weeks, or months, and with this growth has come an enormous increase in the volume of papers to be handled. To meet the demand for better filing equipment that naturally arose with this increased volume of paper, the first systematic filing device was developed - the box file. This consisted of a box, its cover opening like a book, with twenty-five or

twenty-six pages or pieces of manila paper, tabbed with the letters of the alphabet and fastened into the box at one side, the papers being filed between these sheets. The box file was followed by the flat file, which was a development of the box file in more permanent form, the pasteboard box being replaced by a wooden drawer. ISO (the International Organization for Standardization) and IEC (the International Electrotechnical 1 Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through

technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. 2 In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote. International Standard ISO/IEC 8652 was prepared by Joint Technical Committee ISO/IEC JTC 1, 3 Information Technology. This second edition cancels and replaces the first edition (ISO 8652:1987), of which it constitutes a 4 technical revision. Annexes A to J form an integral part of this International Standard.
