Every Tool's a Hammer is a chronicle of my life as a maker. It's an exploration of making, but it's also a permission slip of sorts from me to you. Permission to grab hold of the things you're interested in, that fascinate you, and to dive deeper into them to see where they lead you. Through stories from forty-plus years of making and molding, building and breaking, along with the lessons I learned along the way, this book is meant to be a toolbox of problem solving, complete with a shop's worth of notes on the tools, techniques, and materials that I use most often. Things like: In Every Tool There Is a Hammer—don't wait until everything is perfect to begin a project, and if you don't have the exact right tool for a task, just use whatever's handy; Increase Your Loose Tolerance—making is messy and filled with screwups, but that's okay, as creativity is a path with twists and turns and not a straight line to be found; Use More Cooling Fluid—it prolongs the life of blades and bits, and it prevents tool failure, but beyond that it's a reminder to slow down and reduce the friction in your work and relationships; Screw Before You Glue—mechanical fasteners allow you to change and modify a project while glue is forever but sometimes you just need the right glue, so I dig into which ones will do the job with the least harm and best effects. This toolbox also includes lessons from many other incredible makers and creators, including: Jamie Hyneman, Nick Offerman, Pixar director Andrew Stanton, Oscar-winner Guillermo del Toro, artist Tom Sachs, and chef Traci Des Jardins. And if everything goes well, we will hopefully save you a few mistakes (and maybe fingers) as well as help you turn your curiosities into creations. I hope this book serves as "creative rocket fuel" (Ed Helms) to build, make, invent, explore, and—most of all—enjoy the thrills of being a creator. This text is designed for advanced Curriculum, Methods, and Issues courses in Early Childhood Education and Child and Family Studies departments. In their barn-burning first book, "Rebuilt," Michael White and Tom Corcoran shared their story and vision of building better Catholic parishes. Now, in their eagerly-anticipated second book, White and Corcoran lay out seventy-five proven tactics for getting the job done. Fr. Michael White and Tom Corcoran know that the fundamental work of the Church is to evangelize—to introduce people to Christ and make them disciples. Still, they're the first to admit: "the difficulty comes when we reach down into the details and get to work." In "Tools for Rebuilding," White and Corcoran share seventy-five foundational tactics that helped to rejuvenate their parish. Their candid, hands-on advice gives a clear way forward—one that will make church matter to the people in the pews and that anyone working in parish ministry can implement. Principles/tactics include: * Get the Right People on the Bus* Christmas Is Over, So Throw Out the Dead Poinsettias* Stop Advertising (Other People's Stuff) in Your Bulletin* Don't Let the Insiders Take All the Good Seats* Just Because It's Slow Doesn't Mean It's Holy* When It Comes to First Communion, Just Surrender* Funerals Are Scud Missiles* Preach the Announcements* Start Getting Rid of Fundraisers* Everything Takes Longer (Than You Think)* Pastor, It's Not All About You* Stop Trying to Make People Go to Church and Make Church Matter There's nothing more satisfying to a woodworker than using handmade kitchen tools in their busy kitchen... For a woodworker there's nothing more satisfying than a project that can be quickly made in a weekend that will get years of daily use. And, out of all the rooms in the house, it's the kitchen that has the most potential for custom made accessories and utensils that will deliver a hard day's work. From the Make Something workshop of David Picciuto, Make Your Own Kitchen Tools offers up a collection of projects that will give your kitchen a handmade feel while also being part of your daily prep and serving of the day's meals and snacks. Make Light Work This gem of a book introduces simple ways to find your own answers. It includes ten tools for doing inner work . The tools are a kind of internal GPS that helps you navigate through life. Are you sometimes overwhelmed by what's on your plate? Do you struggle with making decisions or setting priorities? Do you feel your life is somehow off track? In 1990, author Kate Sutherland was burnt out, bruised and confused. A book from a friend inspired her to visit the Findhorn Foundation in northern Scotland where she learned about inner work: ways of working based in intuition, perception, intention and consciousness. For over 20 years, inner work has enriched and transformed Kate's life, from her successful consulting practice and 18-year marriage, to her ongoing sense of meaning and purpose. Inner work tools help with little things too, like: How to deal with the person who drives you crazy What food options are best for you or your family Even how to navigate home when an accident snarls traffic The book introduces each tool through a brief personal story, a step by step exercise, and commentaries on finer points and possible pitfalls. Also included is a chapter on integrating the tools into daily life. How revolutionary would it be to find your own answers any time you are confused, overwhelmed, or simply seeking greater clarity? How many glasses of wine can you have with dinner before blowing your diet, your cool, or your budget? When it comes to alcohol use, many of us find it difficult to draw the line between problem-free enjoyment and harmful overindulgence. Drawing on 30 years of research and nearly three dozen clinical trials, recognized experts William R. Miller and Ricardo F. Muñoz supply hard facts and current data you can use to evaluate your alcohol consumption and judge its impact on your physical and emotional health. Armed with a fresh perspective on your drinking and its consequences, you decide whether moderation fits your needs. Without resorting to labels or moralizing, Miller and Muñoz help you establish a simple, pragmatic, and adaptable plan for meeting your goals and achieving the results you want. Set apart by its science-based approach and straightforward advice, this book is the thinking person's guide to sensible alcohol use. Practical Ideas for a fun, affordable hobby This comprehensive guide covers all the elements needed for setting up and maintaining a personal woodturning shop on a budget. A groundbreaking book about personal growth that presents a uniquely effective set of four tools that bring about dynamic change in the present and impart a greater understanding of the depth and complexity of the human condition over the longterm. The Tools addresses the most common complaint patients have about psychotherapy: the interminable wait for change to begin. Barry Michels, an LA-based therapist, was frustrated by his inability to bring his patients faster relief from the issues that plagued them. He found a mentor in Phil Stutz, a psychiatrist who years before devised a methodology that arose from a similar disenchantment. The traditional therapeutic model sets its sights on the past, but Stutz and Michels employ an arsenal of tools—exercises that access the power of the unconscious and effectively meet the most persistent problems people face—and the results are electrifying. Stutz and Michels are much sought-after—a recent profile in The New Yorker touted them as an "open secret" in Hollywood—and treat a high-powered and creative clientele. Their first work, The Tools transcends the typical self-help genre because of its paradigm-changing material, the credibility of its authors, and the instant appeal and empowerment of its message. Crispin and Gregory define agile testing and illustrate the tester's role with examples from real agile teams. They teach you how to use the agile testing quadrants to identify what testing is needed, who should do it, and what tools might help. The book chronicles an agile software development iteration from the viewpoint of a tester and explains the seven key success factors of agile testing. Make all the classic hand-woodworking tools you want with this fantastic guide. From the essential materials and finishes to the workshop techniques, you'll learn every facet of making and modifying your own tools. Tune and improve a classic Bailey pattern plane, modify bench vises, make handles to improve saws, chisels, and screwdrivers. Every chapter includes the author's own photos, line drawings, and plans. Bonus: a color section featuring all the projects. Higher education leaders and their teams should always seek to add value to their decision-making processes. Planning, Policy, and Politics in Higher Education: Tools to Help Leaders Make Strategic Choices provides a strategic decision-making model and specific tools to help maximize the opportunities for making successful choices. The model was introduced by Dr. Anderes in the book Navigating Through Turbulent Times: Applying a System and University Strategic Decision Making Model. It is built on the use of new tools, including a planning and assessment framework, future scans, an issue analysis inventory, and decision matrix. The new tools in combination with a strong strategic planning process, transparency for all constituencies, and high quality information focused on the future and globally gives leaders the greatest opportunity to make thoughtful choices aligned with their primary goals. The strategic decision-making model consists of six components: 1) Creating an organizational mentality committed to strategic thinking, 2) maximizing the amount of high quality historical data and information for analyses to inform decision makers, 3) routinizing the use of globalized scans of the future integrated with other decision-making information, 4) supporting ongoing strategic planning processes, 5) ensuring transparency to incorporate all key constituencies in planning, and 6) implementing a planning and assessment framework that allows leaders to weigh and filter information into thoughtfully constructed strategic alternatives and action plans. The success of the model is based on the integration of all components, with strategic thinking permeating all aspects of decision making. Board, system, and university leaders and their teams will benefit from the use of the strategic decision-making model in crafting well-informed choices. They will have greater confidence in supporting those choices to the myriad internal and external constituencies they serve. The planning outcomes will be derived from a set of new and expanded resources that provide greater organizational certainty in the final choices. The certainty in the choices will be based on the exhaustive use of the tools in translating strategies into key outcomes and the increased capacity to measure success in meeting board and institutional goals. 50 Classic Devices You

Covers topics like computer hardware, combinatorial logic, sequential logic, computer architecture, computer anatomy, and Input/Output. Many coders are unfamiliar with the underlying technologies that make their programs run. But why should you care when your code appears to work? Because you want it to run well and not be riddled with hard-to-find bugs. You don't want to be in the news because your code had a security problem. Lots of technical detail is available online but it's not organized or collected into a convenient place. In The Secret Life of Programs, veteran engineer Jonathan E. Steinhart explores--in depth--the foundational concepts that underlie the machine. Subjects like computer hardware, how software behaves on hardware, as well as how people have solved problems using technology over time. You'll learn: How the real world is converted into a form that computers understand, like bits, logic, numbers, text, and colors The fundamental building blocks that make up a computer including logic gates, adders, decoders, registers, and memory Why designing programs to match computer hardware, especially memory, improves performance How programs are converted into machine language that computers understand How software building blocks are combined to create programs like web browsers Clever tricks for making programs more efficient, like loop invariance, strength reduction, and recursive subdivision The fundamentals of computer security and machine intelligence Project design, documentation, scheduling, portability, maintenance, and other practical programming realities. Learn what really happens when your code runs on the machine and you'll learn to craft better, more efficient code. And he shows how HR can apply these tools to talent management. Examples include: · Using engineering tolerances to find pivot points that job descriptions miss · Using inventory and supply-chain analytics to ensure a ready supply of the right talent · Applying logistics tools to optimize succession planning and leadership development · Adapting consumer research tools to find untapped value in total rewards Retooling HR builds on Boudreau's bestselling book Beyond HR, which traces HR's evolution as a decision science.
