Words: A User's Guide is an accessible and invaluable reference that is ideal for students, business people and advanced learners of English. The book is structured in groups of words that may be confused because they sound alike, look alike or seem to have similar meanings, and this approach makes it much more intuitive and easy to use than a dictionary. Contrasting over 5000 words (such as habitable and inhabitable, precipitation and rainfall, reigns and reins), Words: a User's Guide provides examples of usage adapted from large national databases of contemporary English, and illustrates each headword in typical contexts and phrases. This book gives you straightforward answers, and helps with pronunciation, spelling, style and levels of formality. For those working internationally it presents international

standards and compares usage in Britain and the USA. Words: A User's Guide is an excellent resource for anyone who wants to communicate well in written and spoken English. "At last! A book about the use of words that clarifies and de-mystifies in an eminently usable way. I would recommend it to anyone who wants to write well. It is a book to keep." Sandy Gilkes, Head of the Centre for Academic Practice, University of Northampton

"Rigorous, fresh, intriguing and downright useful, it deserves a place on every properly stocked reference shelf." Brian Cathcart, Professor of Journalism, Kingston University "From the pedantic to the permissive, everyone who's interested in the English language and the way we speak and write it will want a copy of this practical, entertaining book." Wynford Hicks (author of Quite Literally and The Basics of English Usage) Give your students a firm foundation in NEC? basics with the 2008 Edition of User's Guide to the National Electrical Code. This full-color, illustrated text has been completely revised to include new chapter features that guide students through the 2008 Code, reinforcing key principles, such as the difference between GFPE and GFCI equipment. With this text, students will understand the intent behind the most critical NEC? requirements, the way NEC? chapters and articles work together, and how the NEC? is related to other electrical standards and building codes. User's Guide is the key to getting the right answers faster and more efficiently. Any classroom teacher, group leader, or individual can project filmstrips properly. Mechanical details can and should be delegated to a member of the class or group. Although the emphasis on the use of visual aids was originally placed on lightening the teacher's load, the pendulum has swung in recent years and it sometimes seems more difficult to teach with some visual aids than without them. Fortunately, this is not the case

with filmstrips. Of course, effective utilization develops with practice, but it is hoped that any reader of this book will see that no special training is needed to use filmstrips well. The Modern Interpretation of an Ancient Internal Alchemy Manual "Yellow Court Classic" (or "Jade Writing", as the text refers to itself) is one of the core classic manuscripts of the Taoist cannon. Even though this Third Century text has been extensively used in the Alchemy Practice in China (especially in the Highest Purity school) and referenced in many later classics (such as "The Secret of the Golden Flower", by Lu Dong Bin), the present book presents its first full translation to English. The term "Yellow Court" literary means the central area of the Emperor's Castle, that is open to the Heaven above and connects the Chambers of different Ministries of the Country. Its multifaceted symbolic meaning indicates, in different contexts, center of the body (Dan Tian), spleen as the center of five main viscera (in Traditional Chinese Medicine), a whole human body, or even the overall potentials of the manifestation of the Individual, that includes his or her field of interaction with an environment. This

Manuscript provides detailed meditation and visualization instructions, and should be, according to Taoist lore, recited by a practitioner (original Chinese verses, also provided in the current book, sound very melodic) until understood and integrated thoroughly. An adept practitioner would thus develop deep understanding of the own physical and mental functions and abilities to correct and cultivate them to a higher perfection, or according to text: "Dispense thousand troubles and heal hundred diseases, become immune even to fierceness of a tiger and cruelty of wolves and capable to refuse the aging forever". The translation and commentary of the text, developed for the purpose of personal practice, is very contemporary and concentrated on the philosophical understanding and practical use in modern times (commentaries take into account some latest scientific views of the Universe) rather than religious, historical or aesthetic aspects of the work. As the full Chinese version (along with Pinyin and word-by-word English translation) of the ancient manuscript is provided, every reader should be also able to an independent study and discover the benefits according to the own, unique aspirations. Tim Matson surveys an often overlooked aspect of independent living—firelight. In this completely revised and updated classic, Matson describes in lively detail all the elements of firelight—beginning with an explanation of the lighting system he developed from his Vermont home. • The romantic history and modern molding of candlepower • Traditional kerosene lamps • The versatile Aladdin • Liquid propane (LP) gas lights • Kerosene and gas pressure lanterns (the Coleman) • Incandescent mantle safety • The "Return of Firelight" from glass-fronted hearths and stoves In addition, Matson shows how to select, assemble, install, and safely maintain these non-electric sources of light. This guide will be indispensable for vacation homes, camps, boats, RVs, independent homesteads—and anywhere in a blackout. Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this - one that provides a complete, detailed guide to buying, using and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners - there is a chapter on "Astronomy Basics" - and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer controlled "go to" model, a 5-inch. More models appeared in quick succession, and Celestron's new range made it

one of the two dominant manufacturers of affordable "go to" telescopes. The United States is in the midst of a new Golden Age of legal weed. The book also includes details on the latest released telescope lines, e.g. the 10-, 12-, 14- and 16-inch aperture models of the Meade LX-R series. As a former editor for Sky & Telescope, Astronomy, and Star & Sky magazines, the author is the ideal person to write this book.

This book de-mystifies the jargon of webcams and computer processing, and provides detailed hints and tips for imaging the Sun, Moon and planets with a webcam. It demonstrates how inexpensive tools are revolutionizing imaging in amateur astronomy. Anyone with a modest telescope and a webcam can now obtain jaw-dropping lunar and planetary images to rival those taken with mid-range astronomical CCD cameras costing thousands of dollars. A glance through the images in this book shows just what spectacular results can be achieved by using a webcam with your telescope! Your scientific results will be sought by professional astronomers. Amateur astronomers of all skill levels are always contemplating their next telescope, and this book points the way to the most suitable instruments. Similarly, those who are buying their first telescopes - and these days not necessarily a low-cost one - will be able to compare and contrast different types and manufacturers. This exciting and revised new guide provides an extensive overview of binoculars and telescopes. It includes detailed up-to-date information on sources, selection and use of virtually every major type, brand, and model on today's market, a truly invaluable treasure-trove of information and helpful advice for all amateur astronomers. Originally written in 2006, much of the first edition is inevitably now out of date, as equipment advances and manufacturers come and go. This second edition not only updates all the existing sections of "A Buyer's and User's Guide to Astronomical Telescopes and Binoculars" but adds two new ones: Astro-imaging and Professional-Amateur collaboration. Thanks to the rapid and amazing developments that have been made in digital cameras - not those specialist cool-chip astronomical cameras, not even DSLRs, but regular general-purpose vacation cameras - it is easily possible to image all sorts of astronomical objects and fields. Technical developments, including the Internet, have also made it possible for amateur astronomers to make a real contribution to science by working with professionals. Selecting the right device for a variety of purposes can be an overwhelming task in a market crowded with observing options, but this comprehensive guide clarifies the process. Anyone planning to purchase binoculars or telescopes for astronomy - whether as a first instrument or as an upgrade to the next level - will find this book a treasure-trove of information and

advice. It also supplies the reader with many useful hints and tips on using astronomical telescopes or binoculars to get the best possible results from your purchase.
