From Quilligan, by permission of Contemporary Obstetrics and Gynecology. vaginal delivery, I have yet to meet a physician who would do something they believed would harm their patient even if they were paid ten times as much for a section. On the other hand, there are fears and misconceptions. I have heard many doctors say "I have never been sued for a section I did, but I have been sued for the section I did not do. " The fear of not having performed a section in my opinion is real, although difficult to prove, and until the public can be educated that cesarean section delivery cannot eradicate fetal death and damage, this fear will remain and will be responsible for some unnecessary cesarean sections. Bruce Flamm and I hope this book will correct misconceptions that have been responsible for many unnecessary cesarean sections. I am still frequently asked the same old question: What is an ideal cesarean section rate? I still give an answer similar to the 1983 answer, perhaps somewhat modified. Algorithms in Obstetrics and Gynaecology presents the core knowledge needed to tackle all situations in obstetrics and gynaecology, in a structured fashion. All algorithms are designed to support rapid decision making in the most clinically relevant situations to minimise the risks of a poor outcome. A range of clinical problems are covered from common non-life-threatening emergencies such as hyperemesis in pregnancy, to life-threatening acute

events such as ectopic pregnancy, acute fetal distress or maternal collapse. Each topic is presented as either an algorithm, a care pathway, or table of key information and has been carefully structured to ensure a logical progression of thought to aid anticipation, early diagnosis and prompt and appropriate management. Accompanying key learning points highlight the essential information from the topic. Based on current national guidelines and clinical evidence, the algorithms and care pathways can be used as a reliable and practical resource for day to day practice in obstetrics and gynaecology. Since our species first evolved, lying and deceit have been an integral part of our social existence. Now, for the first time, philosopher and evolutionary psychologist David Livingstone Smith elucidates the essential role that deception and self-deception have played in human evolution and shows that the very structure of our minds has been shaped by the need to deceive. Readers of Richard Dawkins and Steven Pinker will find this a fascinating book, which declares that our extraordinary ability to deceive others, and even deceive our own selves "lies" at the heart of our humanity.
