The Wiley Blackwell Companion to Political Geography Dec 19 2019 The Wiley Blackwell Companion to Political Geography aims to account for the intellectual and worldly developments that have taken place in and around political geography in the last 10 years. Bringing together established names in the field as well as new scholars, it highlights provocative theoretical and conceptual debates on political geography from a range of global perspectives. Discusses the latest developments and places increased emphasis on modes of thinking, contested key concepts, and on geopolitics, climate change and terrorism Explores the influence of the practice-based methods in geography and concepts including postcolonialism, feminist geographies, the notion of the Anthropocene, and new understandings of the role of non-human actors in networks of power Offers an accessible introduction to political geography for those in allied fields including political science, international relations, and sociology

Practicing Qualitative Methods in Health Geographies May 16 2022 Health geographers are increasingly turning to a diverse range of interpretative methodologies to explore the complexities of health, illness, space and place to gain more comprehensive understandings of well-being and broader social models of health and health care. Drawing upon postmodernism, many health geographers are concerned with issues of representation, the body and health care policy. Also related to an emphasis on the body is the growing literature in feminist health geography that investigates the metaphorical, physical and emotional challenges of the body and disease. Reflecting these interests, the chapters in this book set out the host of creative qualitative methods being used to explore the psychosocial experiences of individuals more directly, using such traditional methods as in-depth interviews and group discussions, participant observation, diaries and discourse analysis, but also more novel techniques such as 'go-along interviews', reflexive writing, illustrations, and photographic techniques. There are several areas of qualitative research unique to geographers which figure prominently in this volume including: health

and place, comparative case study analysis, and qualitative approaches to the use of geographic information systems (GIS). This collection brings together a wide range of empirical concerns related to questions of health and shines a light on the diversity of qualitative methods in practice. Illustrating how qualitative methodologies are used in diverse health contexts this book fills an important niche for health geographers but will have wide appeal to health and geographic researchers.

CNS Cancer Aug 07 2021 Cancers of the central nervous system are among the most lethal of human neoplasms. They are recalcitrant to even intensive multimodality therapies that include surgery, radiotherapy, and chemotherapy. Moreover, especially in children, the consequences of these therapies can itself be devastating and involve serious cognitive and developmental disorders. It is small wonder that such cancers have come under the intense scrutiny of each of the subspecialties of clinical care and investigation as well as attracting some of the best basic research scientists. Their joint efforts are gradually peeling away the mysteries surrounding the genesis and progression of these tumors and inroads are

being steadily made into understanding why they resist therapies. This makes it an especially opportune time to assemble some of the best investigators in the field to review the “state of the art” in the various arenas that comprise the assault on CNS tumors. The breadth of this effort by the clinical and basic neuro-oncology community is quite simply amazing. To a large extent, it evolves from the knowledge of the human genome and its regulation that has been hard won over the past two decades.

Key Methods in Geography Feb 01 2021

"Practical, accessible, careful and interesting, this...revised volume brings the subject up-to-date and explains, in bite sized chunks, the ‘how’s’ and ‘why’s’ of modern day geographical study...[It] brings together physical and human approaches again in a new synthesis."

—Danny Dorling, Professor of Geography, University of Oxford

Key Methods in Geography is the perfect introductory companion, providing an overview of qualitative and quantitative methods for human and physical geography. This Third Edition Features: 12 new chapters representing emerging themes including online, virtual and digital geographical methods Real-life case study examples

**Summaries and exercises for each chapter
Free online access to full text of Progress in
Human Geography and Progress in Physical
Geography Progress Reports The teaching of
research methods is integral to all geography
courses: Key Methods in Geography, Third
Edition explains all of the key methods with
which geography undergraduates must be
conversant.**

**Encyclopedia of the Anthropocene Apr 03
2021 Encyclopedia of the Anthropocene
presents a currency-based, global synthesis
cataloguing the impact of humanity's global
ecological footprint. Covering a multitude of
aspects related to Climate Change,
Biodiversity, Contaminants, Geological,
Energy and Ethics, leading scientists provide
foundational essays that enable researchers
to define and scrutinize information, ideas,
relationships, meanings and ideas within the
Anthropocene concept. Questions widely
debated among scientists, humanists,
conservationists, politicians and others are
included, providing discussion on when the
Anthropocene began, what to call it, whether
it should be considered an official geological
epoch, whether it can be contained in time,
and how it will affect future generations.
Although the idea that humanity has driven**

the planet into a new geological epoch has been around since the dawn of the 20th century, the term 'Anthropocene' was only first used by ecologist Eugene Stoermer in the 1980s, and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000. Presents comprehensive and systematic coverage of topics related to the Anthropocene, with a focus on the Geosciences and Environmental science Includes point-counterpoint articles debating key aspects of the Anthropocene, giving users an even-handed navigation of this complex area Provides historic, seminal papers and essays from leading scientists and philosophers who demonstrate changes in the Anthropocene concept over time

The Oxford Handbook of Material Culture Studies Sep 20 2022 Written by an international team of experts, the Handbook makes accessible a full range of theoretical and applied approaches to the study of material culture, and the place of materiality in social theory, presenting current thinking about material culture from the fields of archaeology, anthropology, geography, and science and technology studies.

Painful Yarns Apr 27 2023 This much anticipated collection of stories, written by

Oxford University Fellow and Pain Scientist, Dr GL Moseley, provides an entertaining and informative way to understand modern pain biology. Described by critics as 'a gem' and by clinicians as 'entertaining and educative', Painful Yarns is a unique book. The stories, some of his travels in outback Australia, some of experiences growing up, are great yarns. At the end of each story, there is a section "so what has this got to do with pain?" in which Lorimer uses the story as a metaphor for some aspect of pain biology. The level of the pain education is appropriate for patients and health professionals. The entertainment is good for everyone. You don't have to be interested in pain to get something from this book and a laugh or two!

Animals and Tourism Sep 27 2020 This book is the first to critically examine the many ways in which tourism and animals intersect and aims to make a meaningful contribution to the growing body of knowledge concerning the relationships between animals, tourists and the tourism industry.

Red Coats and Wild Birds Oct 09 2021 During the nineteenth century, Britain maintained a complex network of garrisons to manage its global empire. While these bases helped the British project power and secure trade routes,

they served more than just a strategic purpose. During their tours abroad, many British officers engaged in formal and informal scientific research. In this ambitious history of ornithology and empire, Kirsten A. Greer tracks British officers as they moved around the world, just as migratory birds traversed borders from season to season. Greer examines the lives, writings, and collections of a number of ornithologist-officers, arguing that the transnational encounters between military men and birds simultaneously shaped military strategy, ideas about race and masculinity, and conceptions of the British Empire. Collecting specimens and tracking migratory bird patterns enabled these men to map the British Empire and the world and therefore to exert imagined control over it. Through its examination of the influence of bird watching on military science and soldiers' contributions to ornithology, *Red Coats and Wild Birds* remaps empire, nature, and scientific inquiry in the nineteenth-century world.

***The Wiley-Blackwell Companion to Human Geography* Dec 31 2020 This volume provides an up-to-date, authoritative synthesis of the discipline of human geography. Unparalleled in scope, the companion offers an**

indispensable overview to the field, representing both historical and contemporary perspectives. Edited and written by the world's leading authorities in the discipline
Divided into three major sections:

Foundations (the history of human geography from Ancient Greece to the late nineteenth century); The Classics (the roots of modern human geography); Contemporary Approaches (current issues and themes in human geography) Each contemporary issue is examined by two contributors offering distinctive perspectives on the same theme

Routledge Handbook of Sports Coaching Jun 17 2022 This title surveys the full depth and breadth of contemporary coaching studies, mapping the existing disciplinary territory and opening up important new areas of research.

Forestry Marketing and Research and Development Services (Transitional and Consequential Provisions) Bill 2007 Jun 24 2020

Neutron Stars and Pulsars Mar 14 2022 Neutron stars are the most compact astronomical objects in the universe which are accessible by direct observation. Studying neutron stars means studying physics in regimes unattainable in any terrestrial laboratory. Understanding their observed

complex phenomena requires a wide range of scientific disciplines, including the nuclear and condensed matter physics of very dense matter in neutron star interiors, plasma physics and quantum electrodynamics of magnetospheres, and the relativistic magneto-hydrodynamics of electron-positron pulsar winds interacting with some ambient medium. Not to mention the test bed neutron stars provide for general relativity theories, and their importance as potential sources of gravitational waves. It is this variety of disciplines which, among others, makes neutron star research so fascinating, not only for those who have been working in the field for many years but also for students and young scientists. The aim of this book is to serve as a reference work which not only reviews the progress made since the early days of pulsar astronomy, but especially focuses on questions such as: "What have we learned about the subject and how did we learn it?", "What are the most important open questions in this area?" and "What new tools, telescopes, observations, and calculations are needed to answer these questions?". All authors who have contributed to this book have devoted a significant part of their scientific careers to exploring the nature of

neutron stars and understanding pulsars. Everyone has paid special attention to writing educational comprehensive review articles with the needs of beginners, students and young scientists as potential readers in mind. This book will be a valuable source of information for these groups.

Canada Among Nations Dec 11 2021

Ethno-ornithology Nov 29 2020 An African proverb states that when a knowledgeable old person dies, a whole library disappears. In that light, this book presents knowledge that is new or has not been readily available until now because it has not previously been captured or reported by indigenous people. Indigenous knowledge that embraces ornithology takes in whole social dimensions that are inter-linked with environmental ethos, conservation and management for sustainability. In contrast, western approaches have tended to reduce knowledge to elemental and material references. This book also looks at the significance of ind.

Saving More Than Seeds Feb 13 2022 Saving More Than Seeds advances understandings of seed-people relations, with particular focus on seed saving. The practice of reusing and exchanging seeds provides foundation for food production and allows humans and seed

to adapt together in dynamic socionatural conditions. But the practice and its practitioners are easily taken for granted, even as they are threatened by neoliberalisation. Combining original ethnographic research with investigation of an evolving corporate seed order, this book reveals seed saving not only as it occurs in fields and gardens but also as it associates with genebanking, genetic engineering, intellectual property rights, and agrifood regulations. Drawing on diverse social sciences literatures, Phillips illustrates ongoing practices of thinking, feeling, and acting with seeds, raising questions about what seed-people relations should accomplish and how different ways of relating might be pursued to change collective futures.

USDA Forest Service Experimental Forests and Ranges Mar 26 2023 *USDA Forest Service Experimental Forests and Ranges (EFRs) are scientific treasures, providing secure, protected research sites where complex and diverse ecological processes are studied over the long term. This book offers several examples of the dynamic interactions among questions of public concern or policy, EFR research, and natural resource management practices and policies. Often, trends observed*

- or expected -- in the early years of a research program are contradicted or confounded as the research record extends over decades. The EFRs are among the few areas in the US where such long-term research has been carried out by teams of scientists. Changes in society's needs and values can also redirect research programs. Each chapter of this book reflects the interplay between the ecological results that emerge from a long-term research project and the social forces that influence questions asked and resources invested in ecological research. While these stories include summaries and syntheses of traditional research results, they offer a distinctly new perspective, a larger and more complete picture than that provided by a more typical 5-year study. They also provide examples of long-term research on EFRs that have provided answers for questions not even imagined at the time the study was installed. Valley Forge National Historical Park, White-tailed Deer Management Plan Jul 26 2020 Encountering Affect Mar 22 2020 Since the mid-1990s, affect has become central to the social sciences and humanities. Debates abound over how to conceptualise affect, and how to understand the interrelationships

between affective life and a range of contemporary political transformations. In Encountering Affect, Ben Anderson explores why understanding affect matters and offers one account of affective life that hones in on the different ways in which affects are ordered. Intervening in debates around non-representational theories, he argues that affective life is always-already 'mediated' - the never finished product of apparatuses, encounters and conditions. Through a wide range of examples including dread-debility-dependency in torture, ordinary hopes, and precariousness, Anderson shows the significance of affect for understanding life today.

The Management of Insects in Recreation and Tourism Sep 08 2021 An insight into the booming industry of insect leisure and tourism, using case studies and examples from around the world.

Animal Cities Jan 20 2020 Animal Cities builds upon a recent surge of interest about animals in the urban context. Considering animals in urban settings is now a firmly established area of study and this book presents a number of valuable case studies that illustrate some of the perspectives that may be adopted. Having an 'urban history' flavour, the book

follows a fourfold agenda. First, the opening chapters look at working and productive animals that lived and died in nineteenth-century cities such as London, Edinburgh and Paris. The argument here is that their presence yields insights into evolving understandings of the category 'urban' and what made a good city. Second, there is a consideration of nineteenth-century animal spectacles, which influenced contemporary interpretations of the urban experience. Third, the theme of contested animal spaces in the city is explored further with regard to backyard chickens in suburban Australia. Finally, there is discussion of the problem of the public companion animal and its role in changing attitudes to public space, illustrated with a chapter on dog-walking in Victorian and Edwardian London. Animal Cities makes a significant contribution to animal studies and is of interest to historical geographers, urban, cultural, social and economic historians and historians of policy and planning.

Play the Game! Jul 06 2021

Political Ecology and Tourism Oct 29 2020

Political ecology explicitly addresses the relations between the social and the natural, arguing that social and environmental conditions are deeply and inextricably linked.

Its emphasis on the material state of nature as the outcome of political processes, as well as the construction and understanding of nature itself as political is greatly relevant to tourism. Very few tourism scholars have used political ecology as a lens to examine tourism-centric natural resource management issues. This book brings together experts in the field, with a foreword from Piers Blaikie, to provide a global exploration of the application of political ecology to tourism. It addresses the underlying issues of power, ownership, and policies that determine the ways in which tourism development decisions are made and implemented. Furthermore, contributions document the complex array of relationships between tourism stakeholders, including indigenous communities, and multiple scales of potential conflicts and compromises. This groundbreaking book covers 15 contributions organized around four cross-cutting themes of communities and livelihoods; class, representation, and power; dispossession and displacement; and, environmental justice and community empowerment. This book will be of great interest to students and scholars in tourism, geography, anthropology, sociology, environmental studies, and natural resources management.

Technological Advances in Microbiological Risk Assessment Oct 21 2022

Explain Pain 2nd Edn. Dec 23 2022 Solid evidence now shows that knowing why we hurt will help us heal. All pain is real, and for many people it is a debilitating part of everyday life. In a world where 1 in 5 of us experience ongoing pain and where there is increasing evidence for the failure of synthetic drugs, take heart: help is at hand. It is now known that understanding more about why things hurt can actually help treat pain. Recent advances in fields such as neurophysiology, brain imaging, immunology, psychology and cellular biology have provided an explanatory platform from which to explore pain. In everyday language accompanied by quirky illustrations, Explain Pain Second Edition discusses how pain responses are produced by the brain, how responses to injury from the autonomic motor and immune systems in your body contribute to pain, and why pain can persist after tissues have had plenty of time to heal. Co-author Dr David Butler, founder of the Neuro Orthopaedic Institute, says that "it is no longer acceptable that pain be just managed: we must expect that it can be treated, and sufferers can alter it themselves through education." Explain

Pain has sold around 60,000 copies worldwide in 5 languages and continues to inspire clinical research and multidisciplinary pain treatment globally. Explain Pain aims to give people in pain the power to challenge pain and to consider new models for viewing what happens to your body and brain during pain. Once they have learnt about the processes involved they can follow a scientific route to recovery. Why a second edition? A decade of scientific research is a lot - and we need to keep on top of it. In the last 10 years there has been increasing support for therapeutic neuroscience education from clinical trials, educational science, neuroscience, plain logic and the failure of drug therapy on chronic pain outcomes. Lorimer and David have subtly changed some of the language so that the second edition can be delivered with much more authority than the first. Noigroup Publications (2013), 133 pages, 90+ illustrations and diagrams, half-canadian wire bound. ISBN: 978-0-9873426-6-9 Authors: Dr David S. Butler and Prof G. Lorimer Moseley. U.S. Department of Transportation Federal Motor Carrier Safety Administration Register Aug 19 2022 SAGE Visual Methods Feb 19 2020 In contemporary Western societies, the visual

domain has come to assume a hitherto unprecedented cultural centrality. Daily life is replete with a potentially endless stream of images and other visual messages: from the electronic and paper-based billboards of the street, to the TV and Internet feeds of the home. The visual has become imbued with a symbolic potency, a signifying power that seemingly eclipses that of all other sensory data. The central aim of this four-volume collection is to explore key approaches to visual research methods and to consider some of the core principles, issues, debates and controversies surrounding the use of visual techniques in relation to three key enterprises: 1) documentation and representation; 2) interpretation and classification and 3) elicitation and collaboration. Volume One: Principles, Issues, Debates and Controversies in Visual Research serves as a theoretical backdrop to the field as a whole. It introduces core epistemological, ethical and methodological debates that effectively cut across the four volume collection as a whole. Volume Two: Documentation and Representation illustrates approaches to visual documentation and representation, from classical documentaries to contemporary, state of the art modes of

visual anthropology and ethnography. Volume Three: Interpretation and Classification examines core debates surrounding and approaches to visual analysis. Volume Four: Elicitation and Collaboration explores participative approaches to visual inquiry.

Doing Museology Differently Apr 15 2022 One might believe that museum studies is a stable field of academic inquiry based on a set of familiar institutional forms and functions. But as institutions museums have never been stable or singular, and neither has the discipline of museum studies. Museum studies as a field of academic inquiry has received little critical attention. One result of this neglect has arguably been a lack of invention in museum studies; another is the distancing of academic museum studies from museum practice. Doing Museology Differently charts a different course. A critical-creative reflection on academic practice, the book takes the form of a narrative account of museological fieldwork. A research story unfolds, challenging academic conventions at the level of its own presentation: the book combines critical museum visiting with an autobiographical voice. The identification of a previously underexplored interdisciplinary space leads the author to experiment with

museum studies using contemporary developments in the theory and practice of human geography. The new approaches to museological research and representation that emerge from this unique inquiry challenge assumed institutional and intellectual boundaries and act as a call to further creative experimentation.

Interpretive Approaches to Global Climate Governance Mar 02 2021 Global climate change is perceived to be one of the biggest challenges for international politics in the 21st century. This work seeks to fuse a global governance perspective together with different interpretive approaches, offering a novel way of looking at international climate politics. Equipped with a common interpretive tool-kit, the authors examine different issue-areas and excavate the contours of an overall pattern - the depoliticisation of climate governance. It is this concept which represents the overarching theme connecting the different contributions, addressing issues such as how the securitization of climate change conceals its socio-economic roots; how highly political decisions and value-judgements are couched in the terms of science; how the reframing of climate change as a matter of economic calculation and

investment narrows the scope of political action; and how the prevailing concentration on technological solutions to climate change turns it into a mere administrative issue to be tackled by experts. Highlighting the depoliticisation of highly political issues provides a means to bring the political back into one of the most important issue areas of 21st century world politics. The editors have assembled a series of 14 interpretive inquiries into discourses of global climate governance which aim to flesh out an interpretive methodology, demonstrating the value it offers to those seeking to achieve a better understanding of global climate governance. This work will be of great interest to students and scholars of environmental politics, political theory and climate change.

***The SAGE Handbook of Human Geography, 2v
May 04 2021 "Superb! How refreshing to see a Handbook that eschews convention and explores the richness and diversity of the geographical imagination in such stimulating and challenging ways." - Peter Dicken, University of Manchester "Stands out as an innovative and exciting contribution that exceeds the genre." - Sallie A. Marston, University of Arizona "Captures wonderfully the richness and complexity of the worlds that***

human beings inhabit... This is a stand-out among handbooks!" - Lily Kong, National University of Singapore "This wonderfully unconventional book demonstrates human geography's character and significance not by marching through traditional themes, but by presenting a set of geographical essays on basic ideas, practices, and concerns." - Alexander B. Murphy, University of Oregon "This SAGE Handbook stands out for its capacity to provoke the reader to think anew about human geography ... essays that offer some profoundly original insights into what it means to engage geographically with the world." - Eric Sheppard, UCLA Published in association with the journal Progress in Human Geography, edited and written by the principal scholars in the discipline, this Handbook demonstrates the difference that thinking about the world geographically makes. Each section considers how human geography shapes the world, interrogates it, and intervenes in it. It includes a major retrospective and prospective introductory essay, with three substantive sections on: Imagining Human Geographies Practising Human Geographies Living Human Geographies The Handbook also has an innovative multimedia component of

conversations about key issues in human geography - as well as an overview of human geography from the Editors. A key reference for any scholar interested in questions about what difference it makes to think spatially or geographically about the world, this Handbook is a rich and textured statement about the geographical imagination.

Methods in Human-Animal Studies Apr 22 2020 This timely book provides a methodological guide for how to conduct and theorize research in human-animal studies. In response to critiques of the anthropomorphic slant to human-animal research, and the increasing political relevance of animals in contemporary environmental debates, this book emphasises methods which bring to light the animal side of multi-species encounters. Drawing from the interdisciplinary strength of human-animal studies, this book contains contributions from practitioners and scholars working in sociology, anthropology, ethology and geography. Each chapter uses a case-study approach to present a theoretical framework and empirical application of cutting-edge methods in human-animal studies, from creative writing in multi-species ethnographies, to visual methods like videography and body mapping. Organized in

three parts: theorizing; collaborating; visualizing, the book equips readers with methodological tools to conduct human-animal studies research attentive to animal lives. Furthermore, chapters reflect on the opportunities, limitations, and ethical considerations of research that seeks to understand our more-than-human worlds. The book is aimed towards undergraduate and graduate students in human-animal studies, and scholars investigating human-animal relations. It will also be of interest to practitioners and policy makers who engage with conservation, wildlife management, or the human-animal interface of urban and regional planning.

Pink Power Feb 25 2023 At the first-ever women's hockey world championships in 1990, Canada dressed its National Women's Team in pink. Offending many, the controversial decision nevertheless drew media and public attention to the series and subsequently registration in girls' hockey went up 40%. Lorna Schultz Nicholson offers an insider's look at the power behind the pink jerseys. [Fry Reading Level - 3.2

Engaging with Animals Jan 24 2023 Experts in the field of human-animal studies investigate the ways in which humans and other animals

interact. While offering different interpretations of the human-non-human interactions, they share a common goal in attempting to find pathways leading to a mutually beneficial and shared co-existence.

Transforming Images Nov 10 2021

Contemporary social and cultural life is increasingly organised around a logic of self-transformation, where changing the body is seen as key. Transforming Images examines how the future functions within this transformative logic to indicate the potential of a materially better time. The book explores the crucial role that images have in organising an imperative for transformation and in making possible, or not, the materialisation of a better future. Coleman asks the questions: which futures are appealing and to whom? How do images tap into and reproduce wider social and cultural processes of inequality? Drawing on the recent 'turns' to affect and emotion and to understanding life in terms of vitality, intensity and 'liveness' in social and cultural theory, the book develops a framework for understanding images as felt and lived out. Analysing different screens across popular culture - the screens of shopping, makeover television programmes, online dieting plans and government health

campaigns - it traces how images of self-transformation bring the future into the present and affectively 'draw in' some bodies more than others. Transforming Images will be of interest to students and scholars working in sociology, media studies, cultural studies and gender studies.

Touching Space, Placing Touch Jul 18 2022

Given that touch and touching is so central to everyday embodied existence, why has it been largely ignored by social scientists for so long? What is the place of touch in our mixed spaces of sociality, work, domesticity, recreation, creativity or care? What conceptual resources and academic languages can we reach towards when approaching tactile activities and somatic experiences through the body? How is this tactile landscape gendered? How is touch becoming revisited and revalidated in late capitalism through animal encounters, tourism, massage, beauty treatments, professional medicine, everyday spiritualities or the aseptic touch-free spaces of automated toilets? How is touch placed and valued within scholarly fieldwork and research itself, integral as it is to the production of embodied epistemologies? How is touch involved in such aesthetic experiences as shaping objects in

sand, or encountering fleshly bodies within a painting? The goal of this edited collection, Touching Space, Placing Touch is twofold: 1. To further advance theoretical and empirical understanding of touch in social science scholarship by focussing on the differential social and cultural meanings of touching and the places of touch. 2. To develop a multi-faceted and interdisciplinary explanations of touch in terms of individual and social life, personal experiences and tasks, and their related cultural contexts. The twelve essays in this volume provide a rich combination of theoretical resources, methodological approaches and empirical investigation. Each chapter takes a distinct aspect of touch within a particular spatial context, exploring this through a mixture of sustained empirical work, critical theories of embodiment, philosophical and psychoanalytic approaches to gendered touch and touching, or the relationship between visual and non-visual culture, to articulate something of the variety and variability of touching experiences. The contributors are a mixture of established and emerging researchers within a growing interdisciplinary field of scholarship, yet the volume has a strong thematic identity and therefore represents the formative collection

concerning the multiple senses of touch within social science scholarship at this time.

**A Companion to Environmental Geography
May 24 2020 A Companion to Environmental Geography is the first book to comprehensively and systematically map the research frontier of 'human-environment geography' in an accessible and comprehensive way. Cross-cuts several areas of a discipline which has traditionally been seen as divided; presenting work by human and physical geographers in the same volume Presents both the current 'state of the art' research and charts future possibilities for the discipline Extends the term 'environmental geography' beyond its 'traditional' meanings to include new work on nature and environment by human and physical geographers - not just hazards, resources, and conservation geographers Contains essays from an outstanding group of international contributors from among established scholars and rising stars in geography**

Play the Game! Aug 27 2020 DigiCat Publishing presents to you this special edition of "Play the Game!" by Ruth Comfort Mitchell. DigiCat Publishing considers every written word to be a legacy of humankind. Every DigiCat book has been carefully reproduced

for republishing in a new modern format. The books are available in print, as well as ebooks. DigiCat hopes you will treat this work with the acknowledgment and passion it deserves as a classic of world literature.

Taking-Place: Non-Representational Theories and Geography Jun 05 2021 Emerging over the past ten years from a set of post-structuralist theoretical lineages, non-representational theories are having a major impact within Human Geography. Non-representational theorisation and research has opened up new sets of problematics around the body, practice and performativity and inspired new ways of doing and writing human geography that aim to engage with the taking-place of everyday life. Drawing together a range of innovative contributions from leading writers, this is the first book to provide an extensive and in-depth overview of non-representational theories and human geography. The work addresses the core themes of this still-developing field, demonstrates the implications of non-representational theories for many aspects of human geographic thought and practice, and highlights areas of emergent critical debate. The collection is structured around four thematic sections - Life, Representation, Ethics and Politics -

which explore the varied relations between non-representational theories and contemporary human geography.

NATO in Afghanistan Jan 12 2022 Modern warfare is almost always multilateral to one degree or another, requiring countries to cooperate as allies or coalition partners. Yet as the war in Afghanistan has made abundantly clear, multilateral cooperation is neither straightforward nor guaranteed. Countries differ significantly in what they are willing to do and how and where they are willing to do it. Some refuse to participate in dangerous or offensive missions. Others change tactical objectives with each new commander. Some countries defer to their commanders while others hold them to strict account. NATO in Afghanistan explores how government structures and party politics in NATO countries shape how battles are waged in the field. Drawing on more than 250 interviews with senior officials from around the world, David Auerswald and Stephen Saideman find that domestic constraints in presidential and single-party parliamentary systems--in countries such as the United States and Britain respectively--differ from those in countries with coalition governments, such as Germany and the Netherlands. As a

result, different countries craft different guidelines for their forces overseas, most notably in the form of military caveats, the often-controversial limits placed on deployed troops. Providing critical insights into the realities of alliance and coalition warfare, NATO in Afghanistan also looks at non-NATO partners such as Australia, and assesses NATO's performance in the 2011 Libyan campaign to show how these domestic political dynamics are by no means unique to Afghanistan.

***Saving the World's Deciduous Forests* Nov 22 2022 Deciduous forests have been remarkably resilient throughout their history, recovering from major shifts in climate and surviving periods of massive deforestation. But today the world's great forests confront more ominous threats than ever before. This visionary book is the first to examine forests consisting of oaks, maples, hickories, beeches, chestnuts, birches and ecologically similar animals and plants on three continents—East Asia, Europe, and North America—to reveal their common origin back in time, the ecological patterns they share, and the approaches to conservation that have been attempted on their behalf. Although these forests face common problems, threats**

due to human activities vary. Different land use and agricultural practices on the three continents, as well as different attitudes about what is worth preserving, have led to strikingly different approaches to forest conservation. Robert Askins explores the strengths and weaknesses of conservation efforts across the continents and concludes that the ideal strategy for the future will blend the best ideas from each.
