**80 Years of Research at the Philips Natuurkundig Laboratorium (1914-1994)** Dec 31 2020 Since World War I, the Natuurkundig Laboratorium has been a crucial center of industrial research for Philips, one of the world's largest electronics companies. In this study, Marc J. de Vries demonstrates how the history of the laboratory can help us understand important changes in the production and uses of technology in the twentieth century. Breaking their study into three periods, each characterized by different research goals and approaches, the authors augment this general history with detailed case studies. The result will be of value to anyone studying the history and philosophy of technology.

*A Guide to Dental Radiography* Nov 10 2021 The radiograph is one of the most valuable tools available in the practice of dentistry, and to maximise the effectiveness of the X-rays, good technique is crucial. This popular practical guide to dental radiography, now in its fourth edition, has been written for dental students and all dental and health professionals involved in taking dental radiographs, including dental practitioners, dental auxiliaries and radiographers. It contains updated material including radiation protection and

digitization, as well as covering the recognized technique in an updated, user-friendly format. It describes how to take intra- and extra-oral radiographs safely, giving advice on how to achieve the best image possible, as well as hints on how to rectify errors. There are chapters on how to achieve quality within a unit or clinic, and how to get the best from processing radiographs. The textbook contains over 250 illustrations, many of them new for this edition.
