Visible Learning Feb 13 2022 This unique and ground-breaking book is the result of 15 years research and syntheses over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

A Woman's Guide to the Sailing Lifestyle Dec 23 2022 A chance sailing trip with a friend from work led me to wonder if I could learn to sail. After all, I'm a woman, and the sailing world seems to favor men. I am not athletic; I didn't grow up in a family where we learned about boating; I would be starting late, since I was in my thirties; and I suffer from seasickness. What I discovered over the next twenty-five years is that I could indeed learn to be a competent sailor. But I didn't expect to be an expert overnight. Instead, as a novice, I layered on new knowledge slowly, over time, through experiential learning. This book describes the process whereby this happened. Using examples from trips along the coast of Maine, New Hampshire, and Massachusetts, it reviews the essential knowledge needed to be a sailor as well as explanations about the parts of a sailboat, major boat systems, and tasks associated with maintaining a sailboat. It also discusses some Zen-like attitudes that lead to successful and fun sailing, such as focusing, the no-blame rule, and stripping down to the essentials. Unlike some

other sailing guides, this book points out that sailing can be a lifestyle that includes many dimensions. It's not just about getting a boat to sail. Traveling by boat is a unique experience, and visiting small coastal New England communities is an adventure. Learning about history, art, ecology, star constellations, technology, and birds are only a few of the kinds of activities that can be built into a rich and rewarding sailing experience. This book will be helpful for people who would like to learn to sail but who are intimidated by the process, particularly women, fledgling sailors just starting out, and families with children.

Optical Studies in Liquids and Solids Mar 14 2022 The study of the vibrations of polyatomic molecules has recently turned into one of the most widespread and powerful methods of studying molecular structure. These vibrations appear directly in the infrared absorption spectra and Raman spectra of gases, liquids, and solids. A measurement of the number of bands in addition to their positions (frequencies or wavelengths) offers the possibility of obtaining a great deal of important information regarding the geometric and mechanical properties of the molecules, the types of chemical bonds, and so forth. It is now quite difficult to list the vast number of specific problems solved by measuring vibrational frequencies. As a result of the successful development of research methods and the widespread application of vibrational spectra in analyzing the structures of molecules and the constitution of materials, it now becomes necessary to develop the theory of molecular vibrations further. Existing theory, of course, is based on the assumption of the harmonicity of molecular vibrations, which, strictly speaking, is not justified experimentally. The anharmonicity of the molecular vibrations has therefore to be taken into account by introducing appropriate approximations. Thus, in carrying out calculations on the vibrations of polyatomic molecules, one uses the force constants calculated from the observed frequency values. However, as a result of the anharmonicity of the vibrations, the values of the observed frequencies differ from the harmonic values, and the force constants used therefore differ from the true ones, i. e.

Sailing Smart Jan 12 2022 Sailing Smart is for every sailor who wants to increase his or her knowledge, understanding, and sailing expertise: the local day-sailor who wants a firmer grasp of the fundamentals, as well as the serious competitor who wants to be up on the latest, most innovative sailing techniques and racing strategies. Buddy Melges, one of the world's best-known sailors, has at last set down his highly original thoughts on how to sail well. He covers the full range of sailing experience, from the general to the specific, the basic to the highly sophisticated. Melges's message is delivered in a bright, uncluttered manner by way of applications from his own sailing experience and through step-by-step instructions on everything from basic boat handling to expert on-the-course tactics and maneuvers. This book is expertly illustrated by the noted sailing artist Ted Brennan, and each drawing is accompanied by a cogent, in-depth explanatory caption.
