Emerging Infections 10 Nov 11 2021 Essential resource for the fight against emerging infectious diseases Incidences such as the 2014 Ebola epidemic in West Africa and the 2015 appearance of Zika in Brazil provide dramatic evidence of the continued ability of microbes to emerge, spread, adapt, and threaten global health. The challenge

facing infectious disease specialists and public health professionals is to improve and find new diagnostic, therapeutic, and prevention strategies. The editors of the 10th installment of the Emerging Infections series have compiled the perspectives of leading infectious disease experts into 22 chapters that provide important updates on a broad range of emerging and reemerging bacterial, viral, parasitic, and fungal infectious diseases in the United States and globally. In addition to focusing on MERS, Ebola virus disease, chikungunya, and Zika virus disease, Emerging Infections 10 explores the global threat of antimicrobial resistance in reviews on carbapenem-resistant Enterobacteriaceae, multiply-resistant gonococcal infections, non-typhoidal Salmonella infections, and artemisinin-resistant Plasmodium falciparum malaria. Topics include both recently- and long-recognized diseases that pose challenges for the clinical, laboratory, research, public health, and animal health communities. Emerging Infections 10 presents new and emerging strategies to prevent, control, and eradicate infectious diseases and guides readers to the primary literature where they can explore individual topics in greater depth. This book is a valuable reference for professionals in microbiology, epidemiology, public health, and clinical and veterinary medicine.

Evidence and Rational Based Research on Chinese Drugs Jul 27 2020 After the successful introduction of acupuncture to the West, recent advances in analytical methods in chemistry, molecular biology and systems biology – especially the development of the “omic” technologies – have again brought Chinese drugs into the focus of research on Traditional Chinese Medicine (TCM). With more than 1000 publications on the chemistry, molecular biology and pharmacology of TCM drugs in international journals over the last 10 years, Chinese drugs are gaining increasingly reputation and impact. These data offer great opportunities for the development of new pharmaceuticals for various clinical applications. International scientists have compiled relevant and trend setting research results in this book. Topics range from the latest methods of quality and safety assurance by chemical and genetic fingerprints to the development of new pharmaceuticals for a future evidence-based therapy e.g. for cancer, cardiovascular, inflammatory or infectious diseases as well as to recent experimental results on multitarget and synergy research for the preparation of multi-extract-pharmaceuticals from TCM.

Social Responsibility and Sustainability May 25 2020 This book comprehensively describes social responsibility and sustainable development, with contributions from scientists and representatives from industry working in the field. The papers are innovative, cross-cutting and many share practice-based experiences, some of which may be replicable elsewhere. Prepared by the Inter-University Sustainable Development Research Programme (IUSDRP) and the World Sustainable Development Research and Transfer Centre (WSD-RTC), it reiterates the current need to promote social responsibility. Social responsibility and sustainable development are two different concepts, whose integration over the years has led to significant advances in the way enterprises see and perceive their operations. It is not only about policies or steps taken to meet legal requirements, but is also about social equality and environmental accountability, also bearing in mind the links with eco-efficiency, innovation, and the health and wellbeing of workers. According to ISO 26000, social responsibility is the responsibility of an organisation for the impacts of its decisions and activities on society and the environment, through transparent and ethical behaviour that: a) contributes to sustainable development, including health and the welfare of society b) takes into account the expectations of stakeholders c) is in compliance with applicable law and consistent with international norms of behaviour d) is integrated throughout the organisation and practised in its relationships. But even though the relations between social responsibility and sustainability are strong, it is still necessary to encourage organisations to adhere to, or at least follow the principles of sustainable development in their operations, giving something back to the community. As such, there is a need for a better understanding of how social responsibility is related to sustainable development, and of the identification of processes, methods and tools that may help the integration of these two important elements. There is also a real need to showcase successful examples of how to structure behaviour and institutional practice in line with the sustainability challenges we face today. Chapter [Reviewing the Stakeholder Value Creation Literature: Towards a Sustainability Approach] is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Comprehensive Geriatric Assessment Aug 28 2020 This book offers an up-to-date review on the principles and practice of multidimensional assessment and management of the older individual, which represents the cornerstone of modern clinical practice in the elderly. The early chapters cover the main elements and scope of the comprehensive geriatric approach and explain the pathways of care from screening and case finding through to in-depth assessment and treatment planning. Subsequent chapters review the evidence of how best to apply the multidimensional assessment and management approach in defined healthcare settings and within specific clinical areas, such as cancer and surgery. Finally, the education and training challenges are reviewed and the prospects for future clinical service and research in this important field are examined. The book is very timely given the recent advances in application of this approach, which reflect the growing international realization that older people are “core business” in many clinical areas where the role of specialist geriatric medicine has hitherto been limited. Accordingly, the book will be relevant to a wide range of clinicians. The authorship comprises many of the best known and widely published experts in their respective fields.
