Revision of: Oxford handbook of critical care nursing / Sheila K. Adam, Sue Osborne. 2009. An ideal resource for intensivists caring for trauma victims in the ICU, Trauma Intensive Care provides point-of-care guidelines for establishing the priorities of care, minimizing complications, and returning patients to the best possible functional outcome. A concise, portable reference that focuses on the management of the ICU patient, this guide covers 138 of the most common critical care on-call problems.

Each chapter includes a presenting problem, immediate questions, differential diagnosis, laboratory and other diagnostic data, and treatment plan. "Doctors heal, or try to, but as nurses we step into the breach, figure out what needs to be done for any given patient today, on this shift, and then, with love and exasperation, do it as best as we can."—from Critical Care "At my job, people die," writes Theresa Brown, capturing both the burden and the singular importance of her profession. Brown, a former English professor at Tufts University, chronicles here her first year as an R.N. in medical oncology. As she does so, Brown illuminates the unique role of nurses in health care, giving us a deeply moving portrait of the day-to-day work nurses do: caring for the person who is ill, not just the illness itself. Critical Care takes us with Brown as she struggles to tend to her patients' needs, both physical (the rigors of chemotherapy) and emotional (their late-night fears). Along the way, we see the work nurses do to fight for their patients' dignity, in spite of punishing treatments and an often uncaring hospital bureaucracy. We also see how a twelve-hour day of caring for the seriously ill gives Brown herself a deeper appreciation of what it means to be alive. Ultimately, this is a book about embracing life, whether in

times of sickness or health. As she takes us into the place where patients and nurses meet, Brown shows us the power of human connection in the face of mortality. She does so with a keen sense of humor and remarkable powers of observation, making *Critical Care* a powerful contribution to the literature of medicine. This handbook considers topics that have general application to the critically ill patient. Basic pathophysiology and understanding of its role in critical care monitoring and management are covered, followed by a close look at trauma related and non-trauma related entities likely to afflict the critically ill surgical patient. The authors consist of practitioners who are experts in their field. They represent the team approach to critical care management where members from the divisions of anesthesia, internal medicine, respiratory medicine, infectious disease and surgical specialties all contribute in formulating intervention, assessment and management plans for the critically ill surgical patient. By emphasising the surgical conditions requiring critical care, *The Surgical Critical Care Handbook* will serve as a quick and easy reference for any medical trainee or practitioner aspiring to join the ICU. This book provides a comprehensive guide to

delivering analgesia and sedation to critically ill patients for professionals and caregivers being involved in the management of these patients. It discusses and explains in detail the advantages and limitations of each drug and device using clear flowcharts, diagrams and tables. Furthermore, it explores the new drugs and – above all – new sedation delivery systems, particularly those for administering volatile anesthetics on ICUs. This book is a valuable and practical resource for anesthesiologists, intensivists and emergency physicians interested in sedation.

Now in paperback, the second edition of the Oxford Textbook of Critical Care is a comprehensive multidisciplinary text covering all aspects of adult intensive care management. Uniquely this text takes a problem-orientated approach providing a key resource for daily clinical issues in the intensive care unit. The text is organized into short topics allowing readers to rapidly access authoritative information on specific clinical problems. Each topic refers to basic physiological principles and provides up-to-date treatment advice supported by references to the most vital literature. Where international differences exist in clinical practice, authors cover alternative views. Key messages summarise each topic in order to aid quick review and decision making. Edited and written by an international group of recognized experts from many disciplines, the

second edition of the Oxford Textbook of Critical Care provides an up-to-date reference that is relevant for intensive care units and emergency departments globally. This volume is the definitive text for all health care providers, including physicians, nurses, respiratory therapists, and other allied health professionals who take care of critically ill patients. This comprehensive book provides practical guidance on the care of the critical patient in the emergency department. It focuses on the ED physician or provider working in a community hospital where, absent the consulting specialists found in a large academic center, the provider must evaluate and stabilize critically ill and injured patients alone. Structured in an easily accessible format, chapters present fundamental information in tables, bullet points, and flow diagrams. Emergency medicine scenarios covered across 38 chapters include acute respiratory failure, spinal cord injuries, seizures and status epilepticus, care of the newborn, and end-of-life care. Written by experts in the field, Emergency Department Critical Care is an essential resource for practicing emergency physicians and trainees, internists and family physicians, advance practice nurses, and physician's assistants who provide care in

emergency departments and urgent care centers. This is a no-nonsense guide to drug treatment in the intensive care unit. It covers the most commonly encountered conditions and is organized by system. Management of each condition is tersely outlined step-by-step in table format. The book also includes non-drug information that is essential to making informed, evidence-based pharmacotherapy decisions, such as risk scores, scales, and assessment tools. The Second Edition has been revised to reflect the latest critical care practice guidelines and up-to-date drug and non-drug information. This issue of *Critical Care Clinics*, Guest Edited by Dr. Stephen M. Pastores and Dr. Wendy R. Greene, focuses on *Critical Care of the Cancer Patient* (Pastores) and *Geriatric Critical Care* (Greene). Dr. Pastores' section of the issue is devoted to *Critical Care of the Cancer Patient* and includes the following topics: *Triage and Prognostication of Cancer Patients Admitted to the ICU; ICU Organization and Interdisciplinary Care for Critically Ill Patients with Cancer; Critical Care of the Hematopoietic Stem Cell Transplant Recipient; Management of Drug Toxicities; Acute Kidney Injury in the Critically Ill Patient with Cancer; Infectious Disease Complications in Cancer Patients; and Palliative, Ethics, and*

End-of-Life Care Issues in the Cancer Patient. Dr. Green's section of the issue, devoted to *Geriatric Critical Care*, includes the following topics: *The effect of aging physiology on critical care; The frailty syndrome: a critical issue in geriatric oncology; Detection of delirium in the intensive care unit: comparison of confusion assessment method for the intensive care unit with confusion assessment method ratings; Evidence-based geriatric nursing protocols for best practice; The effect of dementia in the critically ill geriatric patient; Nutritional assessment: a primary component of multidimensional geriatric assessment in the ICU; Rehabilitation concerns in the geriatric critically ill and injured; and Geriatric palliative care. Measuring the quality of a complex service like critical care that combines the highest technology with the most intimate caring is a challenge. Recently, consumers, clinicians, and payers have requested more formal assessments and comparisons of the quality and costs of medical care [2]. Donabedian [1] proposed a framework for thinking about the quality of medical care that separates quality into three components: structure, process, and outcome. An instructive analogy for understanding this framework is to imagine a food critic*

evaluating the quality of a restaurant. The critic might comment on the decoration and lighting of the restaurant, how close the tables are to each other, the extent of the wine list and where the chef trained. These are all evaluations of the restaurant structure. In addition, the critic might comment on whether the service was courteous and timely - measures of process. Finally, the critic might comment on outcomes like customer satisfaction or food poisoning. Similarly, to a health care critic, structure is the physical and human resources used to deliver medical care. Processes are the actual treatments offered to patients.

Finally, outcomes are what happens to patients, for example, mortality, quality of life, and satisfaction with care (Table 1). There is a debate about which of these measurements is the most important measure of quality. Why write a book on the management of critically ill patients? Over the past few decades we have seen an enormous growth in the number of intensive care units (ICU) across the world. Indeed, it is estimated that a large proportion of health care expenses are devoted to patients in these specialized units. Medical students, residents, fellows, attending physicians, critical care nurses, pharmacists, respiratory therapists, and other

health-care providers (irrespective of their ultimate field of practice) will spend several months or years of their professional lives taking care of critically ill or severely injured patients. These clinicians must have special training, experience, and competence in managing complex problems in their patients. Moreover, these clinicians must interpret data obtained by many kinds of monitoring devices, and they must integrate this information with their knowledge of the pathophysiology of disease. Even more important is the fact that anyone working in an ICU or with a critically ill patient must approach patients with a multidisciplinary team. The phrase there is no I in TEAM comes to mind. Take the best possible care of adult critical care patients with *Critical Care Medicine: Principles of Diagnosis and Management in the Adult!* Editors Dr. Joseph Parrillo and Dr. Phillip Dellinger, two of the most respected names in critical care medicine, combine their extensive knowledge with that of hundreds of top authorities in the field to bring you expert, state-of-the-art answers to any clinical question you may face in the intensive care unit.
