I have worked in facility design, construction and maintenance for over 40 years and this is the resource I turn to on the subject. Rather than following a haphazard, hit-and-miss approach to facility maintenance, NASA takes a common-sense approach that is methodical and not overblown. This is the way to go if you are concerned about budget AND reliability /availability. Because - let's face it - everything has a cost and facilities budgets can only go so far. There is always a list of projects on backlog waiting for funding. This book shows how to prioritize those projects and make the best use of limited resources. Variations of RCM are employed by thousands of public and private organizations world-wide to address a host of reliability issues in order to improve Overall Equipment Effectiveness (OEE) while controlling the Life-Cycle Cost (LCC) inherent with Asset Management and Facility Stewardship. Why buy a book you can download for free? We print this book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these large documents as a service so you don't have to. The books are compact, tightly-bound, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a SDVOSB. Tedious data collection can now be automated relatively cheaply and with an enormous increase in reliability. New techniques of measurement are accessible with the "intelligent" instrumentation made possible by these programmable devices, and the ease of use of even standard measurement techniques may be improved by the data processing capabilities of the humblest micro. The latest items of commercial laboratory instrumentation are invariably "computer controlled", although this is more likely to mean that a microprocessor is involved than that a versatile microcomputer is provided along with the instrument. It is clear that all scientists of the future will need some knowledge of computers, if only to aid them in mastering the button pushing associated with gleaming new instruments. However, to be able to exploit this newly accessible computing power to the full the practising laboratory scientist must gain sufficient understanding to utilise the communication channels between apparatus on the laboratory bench and program within the computer. A novel public health concept, the Fangcang Shelter Hospital was first proposed by Professor Wang Chen, an academician of Chinese Academy of Engineering, in Wuhan, China, in February 2020. While responding to the coronavirus disease 2019 (COVID-19) outbreak, medical staff faced the pressing situation of limited medical supplies, which led Professor Wang Chen to the suggestion of converting large-scale public venues such as exhibition centers and indoor stadiums into shelter hospitals to receive large number of patients, as this involved minimum time and monetary costs. The five essential functions of Fangcang Shelter Hospitals (isolation, triage, provision of basic medical care, frequent monitoring and rapid referral, and essential living and social engagement) enable shelter hospitals to receive patients with mild to moderate symptoms of COVID-19, and have the greatest impact on isolating the source of infection and expanding the area's health-care capacity.Two of the first three Fangcang Shelter Hospitals set up in Wuhan were redeveloped by Zall Group Property from existing buildings, while Zall Foundation was responsible for the provision of essential medical supplies and logistical support to facilitate the running of these shelter hospitals. In total, the two shelter hospitals have been instrumental in diagnosing, treating and curing 3663 patients. Under the medical expertise and guidance of Professor Wang Chen, as well as inputs from Zall Foundation's crews who contributed to the design, renovation and operation of these shelter hospitals, this manual encompasses knowledge and experience distilled from the running of these Fangcang Shelter Hospitals. Covering five important aspects, namely the proposal, design, renovation, operation, and logistical support for shelter hospitals, this booklet aims to be a useful reference for other epidemic prevention and control efforts in regions around the world. The manual has been translated into more than 20 languages. Popular Science gives our readers the information and tools to improve their technology and their world.
