Civil rights rhetoric has been central to the debate over U.S. immigration policy since at least the 1960s. A coalition of interest groups, including churches, ethnic organizations, civil rights groups, and employer associations has played a fundamental role in advancing civil rights norms in the immigration arena. The growing importance of civil rights rhetoric in the debate over U.S. immigration policy, DeLaet asserts, helps to explain the liberalization of U.S. immigration policy in spite of growing evidence that the public opposition to immigration has grown during the same period. In turn, the liberalization of U.S. immigration policy has contributed to rising numbers of both legal and illegal immigrants. Thus, high levels of immigration reflect the basic provisions of current U.S. immigration policy, rather than a loss of governmental control. Many analysts have suggested that the immigration policy reforms passed by Congress in 1996 marked the beginning of a new era of restrictionism. However, as DeLaet illustrates, the new restrictions adopted in 1996 contain many of the same loopholes as previous legislation, indicating the coalition of interest groups supporting immigration still pose a significant obstacle to efforts to restrict immigration. **Financial and Managerial Accounting: The Basis for Business Decisions** continues to offer a solid foundation for students who are learning basic accounting concepts. - recognize your allies and view your enemies as potential partners
- use humor to make yourself heard, defuse potentially violent situations, and "laugh your way to victory"

Praise for *Blueprint for Revolution* "The title is no exaggeration. *Otpor's* methods . . . have been adopted by democracy movements around the world. The Egyptian opposition used them to topple Hosni Mubarak. In Lebanon, the Serbs helped the Cedar Revolution extricate the country from Syrian control. In Maldives, their methods were the key to overthrowing a dictator who had held power for thirty years. In many other countries, people have used

what *Canvas* teaches to accomplish other political goals, such as fighting corruption or protecting the environment."—The New York Times "A clear, well-constructed, and easily applicable set of principles for any David facing any Goliath (sans slingshot, of course) . . . By the end of *Blueprint*, the idea that a punch is no match for a punch line feels like anything but a joke."—The Boston Globe "An entertaining primer on the theory and practice of peaceful protest."—The Guardian "With this wonderful book, Srdja Popovic is inspiring ordinary people facing injustice and oppression to use this tool kit to challenge their oppressors and create something much better. When I was growing up, we dreamed that young people could bring down those who misused their power and create a more just and democratic society. For Srdja Popovic, living in Belgrade in 1998, this same dream was potentially a much more dangerous idea. But with an extraordinarily courageous group of students that formed *Otpor!*, Srdja used imagination, invention, cunning, and lots of humor to create a movement that not only succeeded in toppling the brutal dictator Slobodan Milošević but has become a blueprint for nonviolent revolution around the world. Srdja rules!"—Peter Gabriel "Blueprint for Revolution is not only a spirited guide to changing the world but a breakthrough in the annals of advice for those who seek justice and democracy. It asks

(and not heavy-handedly): As long as you want to change the world, why not do it joyfully? It's not just funny. It's seriously funny. No joke."—Todd Gitlin, author of *The Sixties* and *Occupy Nation* This book throws a spotlight on innovation across the software universe, setting out key issues and highlighting policy perspectives. It spans research and development, invention, production, distribution and use of software in the market. It also covers core innovation themes from a user perspective -- including security and privacy, mobility, interoperability, accessibility and reliability. This book provides a comprehensive introduction to travel marketing, tourism economics and the airline product. At the same time, it provides an overview on the political, socio-economic, environmental and technological impacts of tourism and its related sectors. This publication covers both theory and practice in an engaging style, that will spark the readers' curiosity. Yet, it presents tourism and airline issues in a concise, yet accessible manner. This will allow prospective tourism practitioners to critically analyze future situations, and to make appropriate decisions in their workplace

environments. Moreover, the book prepares undergraduate students and aspiring managers alike with a thorough exposure to the latest industry developments. "Dr. Camilleri provides tourism students and practitioners with a clear and comprehensive picture of the main institutions, operations and activities of the travel industry." Philip Kotler, S.C. Johnson & Son Distinguished Professor of International Marketing, Kellogg School of Management, Northwestern University, Evanston/Chicago, IL, USA "This book is the first of its kind to provide an insightful and well-structured application of travel and tourism marketing and economics to the airline industry. Student readers will find this systematic approach invaluable when placing aviation within the wider tourism context, drawing upon the disciplines of economics and marketing." Brian King, Professor of Tourism and Associate Dean, School of Hotel and Tourism Management, The Hong Kong Polytechnic University, Hong Kong "The remarkable growth in international tourism over the last century has been directly influenced by technological, and operational innovations in the airline sector which continue to define the nature, scale and direction of tourist flows and consequential tourism development. Key factors in this relationship between tourism and the airline sector are marketing and economics, both of which are fundamental to the success of tourism in general and

airlines in particular, not least given the increasing significance of low-cost airline operations. Hence, uniquely drawing together these three themes, this book provides a valuable introduction to the marketing and economics of tourism with a specific focus on airline operations, and should be considered essential reading for future managers in the tourism sector." Richard Sharpley, Professor of Tourism, School of Management, University of Central Lancashire, UK "The book's unique positioning in terms of the importance of and the relationships between tourism marketing, tourism economics and airline product will create a distinct niche for the book in the travel literature." C. Michael Hall, Professor of Tourism, Department of Management, Marketing and Entrepreneurship, University of Canterbury, Christchurch, New Zealand "A very unique textbook that offers integrated lessons on marketing, economics, and airline services. College students of travel and tourism in many parts of the world will benefit from the author's thoughtful writing style of simplicity and clarity." Liping A. Cai, Professor and Director, Purdue Tourism & Hospitality Research Center, Purdue University, West Lafayette, IN, USA "An interesting volume that provides a good coverage of airline transportation matters not always well considered in tourism books. Traditional strategic and operational issues, as well as the most recent developments and

emerging trends are dealt with in a concise yet clear and rational way. Summaries, questions and topics for discussion in each chapter make it a useful basis for both taught courses or self-education." Rodolfo Baggio, Professor of Tourism and Social Dynamics, Bocconi University, Milan, Italy "This is a very useful introductory book that summarises a wealth of knowledge in an accessible format. It explains the relation between marketing and economics, and applies it to the business of airline management as well as the tourism industry overall." Xavier Font, Professor of Sustainability Marketing, School of Hospitality and Tourism Management, University of Surrey, UK and Visiting Professor, Hospitality Academy, NHTV Breda, Netherlands "This book addresses the key principles of tourism marketing, economics and the airline industry. It covers a wide range of theory at the same time as offering real-life case studies, and offers readers a comprehensive understanding of how these important industries work, and the underpinning challenges that will shape their future. It is suitable for undergraduate students as well as travel professionals, and I would highly recommend it." Clare Weeden, Principal Lecturer in Tourism and Marketing at the School of Sport and Service Management, University of Brighton, UK "In the current environment a grasp of the basics of marketing to diverse consumers is very important. Customers are possessed of

sophisticated knowledge driven by innovations in business as well from highly developed technological advances. This text will inform and update students and those planning a career in travel and tourism. Mark Camilleri has produced an accessible book, which identifies ways to accumulate and use new knowledge to be at the vanguard of marketing, which is both essential and timely." Peter Wiltshier, Senior Lecturer & Programme Leader for Travel & Tourism, College of Business, Law and Social Sciences, University of Derby, UK "This contemporary text provides an authoritative read on the dynamics, interactions and complexities of the modern travel and tourism industries with a necessary, and much welcomed, mixture of theory and practice suitable for undergraduate, graduate and professional markets." Alan Fyall, Orange County Endowed Professor of Tourism Marketing, University of Central Florida, FL, USA This book provides an introduction to the critical role of ecosystem-based disaster risk resilience (Eco-DRR) for building community resilience to multiple environmental risks such as rising heat, water stress, and pollution. Blue-green infrastructure (BGI) is an Eco-DRR tool that is an under-explored paradigm and can respond as one common strategy to targets set by the Sustainable Development Goals (UNDP), Climate Agreements (UNEP), the Sendai Framework (UNISDR), and the New Urban Agenda (UNCHS). Highlighted here in a systematic way is the

importance of blue-green infrastructures in resilience building. The purpose is to introduce readers to the challenging context of development and opportunity creation for Eco-DRR. The roles of policy, scientific research, and implementation are presented cohesively. An attractive proposition of the book is a collection of case studies from different parts of the world where integration of BGI is experimented with at various levels of success. It envisages that shared tacit experiences from the realm of practice will further strengthen explicit knowledge. The focus in this book is on need and context building, policy and science (investigation, analysis, and design), case studies, and a road map for the future in four successive parts. Each part is self-sufficient yet linked to its predecessor, successor, or both, as the case may be. This report describes a screening study of in all ninety-nine conventional and emerging per- and polyfluoroalkyl substances (PFASs) in the Nordic environment. In addition, extractable organic fluorine (EOF) was analysed. The latter can provide the amount, but not identity, of organofluorine in the samples, which in turn can be used to assess the mass balance between known and unknown PFASs. The study was initiated by the Nordic Screening Group and funded by these and the Nordic Council of Ministers through the Chemicals Group. A total of 102 samples were analyzed in this study, including bird eggs, fish, marine mammals, terrestrial

mammals, surface water, WWTP effluents and sludge, and air. Samples were collected by institutes from the participating countries and self-governing areas; Denmark, Faroe Islands, Finland, Greenland, Iceland, Norway, and Sweden. But in many cities, people who suffer sudden cardiac arrest are up to 46 times more likely

to die than those who experience cardiac arrest in Seattle and King County, Washington, or Rochester, Minnesota--an astonishing and completely preventable variance in survival rates. In Resuscitate!, Mickey S. Eisenberg, an expert in emergency medical services (EMS), identifies fifty factors associated with the likelihood of surviving cardiac arrest and lays out twenty-five specific steps involved in raising a community's cardiac arrest survival rate. He offers recommendations for immediate and long-term improvement of EMS services, with actions that can be taken at local and national levels that will ultimately benefit anyone who needs emergency care, for any reason. This book will be valuable for EMS medical directors, administrators and supervisors, and personnel - paramedics, EMTs, dispatchers - as well as elected officials, health services administrators, and concerned citizens. In short, this book is for everyone who wants to learn what we can all do to help more people survive sudden cardiac arrest. Explains what makes people love and appreciate their bodies, and offers advice on how we can all do the same. Bioelectric sensors are unique diagnostic principles and technologies. Although they share many traits with electrochemical sensors, especially regarding the common features of instrumentation, they are focused on the measurement of the electric properties of biorecognition elements as a reflection of cellular, biological, and biomolecular functions in a rapid, very sensitive, and often non-invasive manner. Bioelectric sensors offer a plethora of options in terms both of assay targets (molecules, cells, organs, and organisms) and methodological approaches (e.g., potentiometry, impedance spectrometry, and patch-clamp electrophysiology). Irrespective of the method of choice, "bioelectric profiling" is being rapidly established as a superior concept for a number

of applications, including in vitro toxicity, signal transduction, real-time medical diagnostics, environmental risk assessment, and drug development. This Special Issue is the first that is exclusively dedicated to the advanced and emerging concepts and technologies of bioelectric sensors. Topics include, but are not restricted to, bioelectric sensors for single cell analysis, electrophysiological olfactory and volatile organic compounds sensors, impedimetric biosensors, microbial fuel cell biosensors, and implantable autonomous bioelectric micro- and nano-sensors. After witnessing the firebombing of the bar where she works, clairvoyant Sookie Stackhouse has her attention diverted when she realizes her vampire lover, Eric Northman, and his "child," Pam, are plotting to kill the vampire who is now their master. They have collected all of their findings in *Mate*, an evidence-driven, seriously funny playbook that will teach you to become a more sexually attractive and romantically

successful man, the right way: No "seduction techniques," No moralizing, No bullshit. Just honest, straightforward talk about the most ethical, effective way to pursue the win-win relationships you want with the women who are best for you. Much of what they've discovered will surprise you, some of it will not, but all of it is important and often misunderstood. So listen up, and stop being stupid! How students get the materials they need as opportunities for higher education expand but funding shrinks. From the top down, *Shadow Libraries* explores the institutions that shape the provision of educational materials, from the formal sector of universities and publishers to the broadly informal ones organized by faculty, copy shops, student unions, and students themselves. It looks at the history of policy battles over access to education in the post-World War II era and at the narrower versions that have played out in relation to research and textbooks, from library policies to book subsidies to, more recently, the several "open" publication models that have emerged in the higher education sector. From the bottom up, *Shadow Libraries* explores how, simply, students get the materials they need. It maps the ubiquitous practice of photocopying and what are—in many cases—the more marginal ones of buying books, visiting libraries, and downloading from unauthorized sources. It looks at the informal networks that emerge in many contexts to

share materials, from face-to-face student networks to Facebook groups, and at the processes that lead to the consolidation of some of those efforts into more organized archives that circulate offline and sometimes online— the shadow libraries of the title. If Alexandra Elbakyan's Sci-Hub is the largest of these efforts to date, the more characteristic part of her story is the prologue: the personal struggle to participate in global scientific and educational communities, and the recourse to a wide array of ad hoc strategies and networks when formal, authorized means are lacking. If Elbakyan's story has struck a chord, it is in part because it brings this contradiction in the academic project into sharp relief—universalist in principle and unequal in practice. Shadow Libraries is a study of that tension in the digital era. Each year the youths' mettle is tested by traps, illusory monsters, and other challenges before returning home to a festival honoring their coming

of age. Yet this year something has gone terribly wrong! Now the adventurers face real danger, and the fate of the town rests on their inexperienced shoulders! Designed specifically for the new Pathfinder Roleplaying Game rules and designed by Jason Bulmahn, the new game's primary designer, Crypt of the Everflame spotlights exciting new rules updates and character abilities, making it an ideal introductory adventure for Pathfinder RPG players. Los sucesivos confinamientos impuestos con ocasión de la grave crisis sanitaria nos han hecho más digitales. Muchos contribuyentes (especialmente, en el ámbito empresarial y societario) ya lo eran; y, desde luego, también lo era la Administración tributaria. La Agencia Tributaria, desde los años 90 del pasado siglo, viene siendo la punta de lanza de la administración electrónica. Su temprana e intensa tecnificación ha permitido ofrecer un amplio catálogo de servicios de apoyo a los contribuyentes (Renta Web, SII, asistentes virtuales, etc.), integrando potentes herramientas de inteligencia artificial para el desarrollo de sus funciones en la lucha contra el fraude fiscal. Esta realidad tecnológica ha sido un factor determinante del cambio del modelo relacional entre los ciudadanos y la Administración. Por un lado, la tecnología ha posibilitado la generalización de la "administración sin papel" propiciada por la Ley 39/2015 de Procedimiento Administrativo Común; por otro, la informática también

está presente en los nuevos instrumentos que favorecen el cumplimiento voluntario de los contribuyentes en el marco de la relación cooperativa por diseño (compliance by design), impulsada por instancias internacionales. En este contexto, la presente obra ofrece una visión sistemática de los diferentes usos de la tecnología por parte de la Agencia Tributaria. En ella se delimitan los distintos ámbitos en que se desenvuelven sus múltiples herramientas y aplicaciones informáticas para, de esta manera, identificar cómo inciden en la dinámica de la relación tributaria y, a su vez, determinar cuáles son los riesgos reales o potenciales que dichos instrumentos generan para los derechos y libertades de los ciudadanos. Este acercamiento a la realidad de la administración tributaria digital permite así plantear una reflexión sobre la incidencia que, en este terreno de las relaciones tributarias, tienen los "derechos digitales" que se abren paso en nuestro ordenamiento jurídico. For a variety of reasons, the MATLAB®-Java interface was never fully documented. This is really quite unfortunate: Java is one of the most widely used programming languages, having many times the number of programmers and programming resources as MATLAB. Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping, it is not suitable for real-world, modern-looking applications. Undocumented Secrets of MATLAB®-Java Programming

aims to correct this misconception. This book shows how using Java can significantly improve MATLAB program appearance and functionality, and that this can be done easily and even without any prior Java knowledge. Readers are led step-by-step from simple to complex customizations. Code snippets, screenshots, and numerous online references are

provided to enable the utilization of this book as both a sequential tutorial and as a random-access reference suited for immediate use. Java-savvy readers will find it easy to tailor code samples for their particular needs; for Java newcomers, an introduction to Java and numerous online references are provided. This book demonstrates how The MATLAB programming environment relies on Java for

numerous tasks, including networking, data-processing algorithms and graphical user-interface (GUI) We can use MATLAB for easy access to external Java functionality, either third-party or user-created Using Java, we can extensively customize the MATLAB environment and application GUI, enabling the creation of visually appealing and usable applications
