An image-rich history of the 1962 Seattle World's Fair, known as the Century 21 Expo. "...profoundly moving..." -Publishers Weekly Nelson Mandela's two great-grandchildren ask their grandmother, Mandela's youngest daughter, 15 questions about their grandad – the global icon of peace and forgiveness who spent 27 years in prison. They learn that he was a freedom fighter who put down his weapons for the sake of peace, and who then became the President of South Africa and a Nobel Peace Prize-winner, and realise that they can continue his legacy in the world today. Seen through a child's perspective, and authored jointly by Nelson Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson's Mandela 100th birthday. This text describes the temperature, water, fertilizer and light needs of more than 300 aquarium plants. Artificial lighting - lamp types, colour temperatures and mounting - is discussed in detail and the author provides advice on choosing the right plants for an aquarium. Ecological factors, flower biology and morphology and reproduction methods receive detailed coverage. The book contains colour photographs with nearly all plants depicted with fully developed submerged foliage. Botanists as well as professional and amateur keepers should find this book useful. Former SEAL Malachai "Mac" MacCarrick is all about the future he's created with his Navy brothers in Eagle Securities. But when an urgent phone call brings his troubled past--and the woman he once loved--into the present, it's a chance to redeem himself that he can't refuse. Original. Original. Students learn more—and with more joy—when lessons connect with their lives and interests while challenging them to stretch and grow. In this book, you'll find practical, ready-to-use strategies for creating active and exciting lessons. You'll learn about: Partnering and grouping students for optimum learning Using interactive learning structures such as Maître d' and Swap Meets to support active learning Incorporating acting, drawing, debating, and more into daily lessons while still meeting rigorous learning goals Infusing lessons with choices in what or how to learn to increase students ownership of their learning Incorporating student self-assessment tools to help children monitor and evaluate their own work and identify ways to improve their learning Filled with lesson plans, precise directions for interactive learning structures, planning guides, and more! DOE/EIA 0384(2009). Provides comprehensive energy data extending over nearly six decades. Included are statistics on total energy productions, consumption, trade, and enrgy prices; overviews of petroleum, natural gas, coal, electricity, nuclear energy, renewable energy, and international energy; financial and environment indicators; and data unit conversions Describes the customized race trucks of Tyrone Malone and the races in which they've engaged. The mission of the National Institute of Standards and Technology (NIST) enables NIST to provide broad support for the advancement of U.S. manufacturing. Research and services supporting manufacturing are intended to be an important component in all of the NIST laboratories. Moreover, since manufacturing is a major part of the U.S. economy, the growth or loss of U.S. manufacturing jobs is a very important issue. Clearly, the successful execution of NIST's programs supporting manufacturing will have a significant impact on manufacturing jobs in the United States. With the multidisciplinary, multisector, and crosscutting nature of manufacturing, the Director of NIST requested that the National Research Council (NRC) assess the manufacturing-related programs at NIST in 2012. Accordingly, a panel of experts was convened by the National Research Council to perform the assessment. The Panel on review of the Manufacturing-Related Programs at the national Institute of Standards and Technology visited the NIST campus in Gaithersburg, Maryland, on March 26-28, 2012. A Review of the Manufacturing-

related Programs at the National Institute of Standards and Technology: Fiscal Year 2012 contains the results of the panel's assessment. The assessment considered manufacturing research at NIST broadly, with emphasis on the specific advanced manufacturing areas: Nanomanufacturing (including Flexible Electronics); Smart Manufacturing (including Robotics); and Next-Generation Materials Measurements, Modeling, and Simulation. The area of Biomanufacturing also reviewed as a subset of the Nanomanufacturing review. As is to be expected for programs covering such wide scope, the boundaries among these broad areas are not rigid and there is some overlap among them. On the basis of its assessment, the panel formed the observations and recommendations which are detailed in this report. Economists have begun to make much greater use of experimental methods in their research. This collection surveys these methods and shows how they can help us to understand firm behaviour in relation to various forms of competition policy. This book presents beautiful full color art of ten of the most amazing unbuilt streamlined auto projects of the interwar era, including a torpedo-like race car with periscopes; teardrop passenger cars; rocket-powered winged autos; Harry Miller's LSR dream car; an aircraft-like three-wheel GP car; and a pair of futuristic Nazi record vehicles. Includes: South Africa, Rhodesia, Zambia, Malawi, South-West Africa, Mocambique, Angola, Swaaziland, Botsawana and Lesotho. When it comes to making your business more profitable and successful, don't look to re-engineering for answers. A better way is to apply the concept of kaizen, which mean making simple, common-sense improvements and refinements to critical business processes. The result: greater productivity, quality, and profits achieved with minimal cost, time, and effort invested. In this book, you discover how to maximize the results of kaizen by applying it to gemba--business processes involved in the manufacture of products and the rendering of services--the areas of your business where, as the author puts it, the "real action" takes place. Nearly decimated in the Holocaust and repressed in the Soviet Union, Hasidism has experienced an extraordinary revival. Hasidic communities, now settled primarily in North America and Israel, have reversed the losses they suffered and are growing exponentially. With powerful attachments to the past, mysticism, community, tradition, and charismatic leadership, Hasidism seems the opposite of contemporary Western culture, yet it has thrived in the democratic countries and culture of the West. How? Who Will Lead Us? reveals the answers in the fascinating story of five contemporary Hasidic dynasties and their handling of the delicate issue of leadership and succession. Revolving around the central figure of the rebbe, the book explores two dynasties with too few successors, two with too many successors, and one that believes their last rebbe continues to lead them even after his death. Samuel C. Heilman, recognized as a foremost expert on modern Jewish Orthodoxy, here provides outsiders with the essential guide to continuity in the Hasidic world. This monograph discusses the various biomass feedstocks currently available for biofuels production, and mechanical preprocessing technologies to reduce the feedstock variability for biofuels applications. Variability in the properties of biomass—in terms of moisture, particle size distribution, and low-density—results in storage, transportation, handling, and feeding issues. Currently, biorefineries face serious particle bridging issues, uneven discharge, jamming of equipment, and transportation problems. These issues must be solved in order for smooth operations to be possible. Mechanical preprocessing technologies, such as size reduction, densification, and moisture management using drying and dewatering, can help to overcome these issues. Many densification systems exist that will assist in converting low-density biomass to a high-density commodity type feedstock. In 6 chapters, the impact of densification process variables, such as temperature, pressure, moisture, etc., on biomass particle agglomeration, the quality of the densified products, and the overall energy consumption of the process are discussed, as are the various compression models for powders that can be used for biomass particles agglomeration behavior and optimization of the densification process using statistical and evolutionary methods. The suitability of these densified products for biochemical and thermochemical conversion pathways is also discussed, as well as the various international standards (CEN and ISO) they must adhere to. The author has worked on biomass preprocessing at Idaho National Laboratory for the last ten years. He is the principal investigator for the U.S. Department of Energy Bioenergy Technologies Office-funded “Biomass Size Reduction and Densification” project. He has developed preprocessing technologies to reduce cost and improve quality. The author has published many papers and books focused on biomass preprocessing and pretreatments. Biomass process engineers and biorefinery managers can benefit from this book. Students in chemical, mechanical, biological, and environmental engineering can also use the book to understand preprocessing technologies, which greatly assist in improving the biomass critical material attributes. The book can help policymakers and energy systems planners to understand the biomass properties limitations and technologies to overcome the same. The use of fracture mechanics in resolving problems in the design of concrete structures is becoming more widely accepted and utilized as current codes cannot always be applied satisfactorily to design conditions. There is wide-ranging technical literature available on the subject but to date there is no readily accessible and systematic source to meet the needs of present practitioners and future designers. Fracture Mechanics and Structural Concrete addresses this need. The book provides a simple and straightforward study of fracture mechanics relating to concrete design and promotes its usage by highlighting the shortcomings of current design codes. It explains how fracture mechanics can overcome certain design problems, such as minimum reinforcement, punching shear failure and the influence of structural size upon shear capacity. Professional engineers, researchers and academics will find Fracture Mechanics and Structural Concrete an essential introduction to the subject. It will also be useful to postgraduate and final-year undergraduate students of civil engineering. Minimizing waste generation offers cost-effective advantages over devising complex disposal treatment plans. Now a leading member of the EPS's Waste Minimization Research Program has assembled the latest ideas for assessing, planning, and implementing waste minimization programs in government and industry alike. Describing successful in-place programs, he demonstrates the compelling economics of waste minimization and discloses practical methods within most any organizational budget-including improved inventory management, materials substitution, process modifications, plant recycling, and more. Reflective shop windows,

limousines with shiny chrome, garishly colored plastic kitsch, and urban scenes have been the favorite subjects of the Photorealists for fifty years. This publication presents the impressive works of art by leading figures in this movement, starting with sixties artists (Richard Estes, Chuck Close, and Don Eddy) and moving through three generations of artists to the hyper-realistic visual experiences of contemporary digital artists (Yigal Ozeri, Robert Neffson). As behavioural insights (BI) become more widely used, countries are looking to expand the application of the methodology to new frontiers of policy making. Political-economy is defined broadly to include the demand-side drivers of antitrust activity such as market failures and interest-groups, along with supply-side drivers. This book covers topics such as: enforcement of cartels; merger control; monopolization and abuse of dominance; and, systemic issues in antitrust enforcement and policy. Motivated by recent events and experiences in antitrust enforcement and policy in the United States and the European Union, and new insights and findings from academic research, this book presents a collection of theoretical, empirical and public policy-oriented articles representing recent research on the political-economy of antitrust. Political-economy is defined broadly to include the demand-side drivers of antitrust activity such as market failures and interest-groups, along with supply-side drivers including ideology and partisan politics as well as the importance of informational limitations in antitrust enforcement and the institutional structure of the antitrust agencies. Examining issues related to the political-economy of antitrust is important as antitrust policy and enforcement provide a key mechanism for preserving the competitiveness of markets, with implications for innovation, efficiency, growth and welfare. This book brings together contributions by leading academic researchers in the areas of political-economy, cartels, merger and non-merger enforcement, as well as economists working with antitrust authorities in the U.S. and E.U., to make a timely contribution for researchers and practitioners. The chapters in this volume cover the full range of topics: enforcement of cartels; merger control; monopolization and abuse of dominance; and, systemic issues in antitrust enforcement and policy. Since the last few years have seen significant changes in both the U.S. and E.U. in the attitudes towards cartels, the book places emphasis on antitrust enforcement of cartels, including topics such as the corpora. Includes the Aerial Warfare In Europe During World War II illustrations pack with over 180 maps, plans, and photos. Gen Henry H. "Hap." Arnold, US Army Air Forces (AAF) Chief of Staff during World War II, maintained diaries for his several journeys to various meetings and conferences throughout the conflict. Volume 1 introduces Hap Arnold, the setting for five of his journeys, the diaries he kept, and evaluations of those journeys and their consequences. General Arnold's travels brought him into strategy meetings and personal conversations with virtually all leaders of Allied forces as well as many AAF troops around the world. He recorded his impressions, feelings, and expectations in his diaries. Maj Gen John W. Huston, USAF, retired, has captured the essence of Henry H. Hap Arnold—the man, the officer, the AAF chief, and his mission. Volume 2 encompasses General Arnold's final seven journeys and the diaries he kept therein. The total world sales of filtration and separation equipment and spares are estimated at US\$29.5 billion in 2003. Good growth is forecast to continue through to 2009, on the back of the expansion in China, and the fresh and wastewater segment growth rates, with a CAGR of more than 6%." --Profile of the International Filtration and Separation Industry - Market Prospects to 2009, 5th Edition This revised and updated 5th edition includes increased coverage on the strategic direction of the industry, plus it offers forecasts, analysis and comment on the filtration and separation industry to 2009. The study also outlines the structure of the global industry, assesses market and technological trends, offers market figures and forecasts to 2009 and identifies the major players. The book covers several topics of biodiversity researches and uses, containing 17 chapters grouped into 5 sections. It begins with an interesting chapter considering the ways in which the very biodiversity could be thought about. Noteworthy is the chapter expounding pretty original "creativity theory of ecosystem". There are several chapters concerning models describing relation between ecological niches and diversity maintenance, the factors underlying avian species imperilment, and diversity turnover rate of a local beetle group. Of special importance is the chapter outlining a theoretical model for morphological disparity in its most widened treatment. Several chapters consider regional aspects of biodiversity in Europe, Asia, Central and South America, among them an approach for monitoring conservation of the regional tropical phytodiversity in India is of special importance. Of interest is also a chapter considering the history of the very idea of biodiversity emergence in ecological researches. Sakura, still grieving Oumi's death, must fight the powerful youko of Uji. But she finds herself no match for the demon's poisonous vapor. It's time for Kohaku and Hayate—with a little help from the full moon—to step in. -- VIZ Media April 11, 2006 - May 13, 2006
