Accessibility and Acceptability in Technical Manuals Mar 06 2021 "Accessibility and Acceptability in Technical Manuals" is written for an audience with a general interest in readability studies, linguistics and technical writing. With the emphasis on technical manuals the book is primarily targeted at those who have a special interest in the design of utility texts and how these texts are received and understood by a multifaceted audience. Accessibility is not a new area and many explanations have been offered over the past years as to why non-experts often have difficulties comprehending texts written by technological experts. This book offers a new approach to accessibility studies, not only style, but also attitudes to style, by asking text consumers which style they prefer for different parts of the text. A key role is played by the Systemic Functional Linguistics' notion of grammatical metaphor, a stylistic choice that is commonly used in technical literature. Grammatical metaphor although apparently obstructing the comprehension for some readers is a common element in the preferred style that separates the insiders from the outsiders. An explanation of this rather surprising result is offered by resorting to Critical Discourse Analysis.

MOSS User's Manual Feb 02 2021 "The MOSS User's Manual has been designed as a reference document for training users of the Map Overlay and Statistical System (MOSS) interactive graphics software. MOSS is the data analysis component of a Geographic Information System (GIS) originally developed by the Western Energy and Land Use Team (WELUT). Currently, MOSS is being developed under the direction of the U.S. Bureau of Land Management with cooperation from the U.S. Fish and Wildlife Service, the U.S. Bureau of Indian Affairs, the U.S. Geological Survey, the U.S. Forest Service, the Soil Conservation Service, the Minerals Management Service and the U.S. Army Corps of Engineers. This document contains the information necessary for a user to access and use the MOSS software. MOSS can address digital map data in both vector and raster, or cell. For convenience, raster processing capabilities are specifically called MAPS (Map Analysis Processing System), due to differences in the software. It is assumed that the reader of this document is familiar with GIS and its applications"--Leaf iii
